Tenth International Conference on Grey Literature : Designing the Grey Grid for Information Society,
8-9 December 2008 / compiled by D.J. Farace and J. Frantzen. – Amsterdam : TextRelease, December 2008. – 1
47 p. ; 30 cm. – Author Index. – (GL-conference series, ISSN 1386-2308 ; No. 10)

The British Library, INIST-CNRS, and NYAM are corporate authors and associate members of GreyNet. This program book contains the schedule for the conference sessions and roundtables. The titles and abstracts of the papers as well as information on the authors are provided. When available, copies of the PowerPoints are also included in notepad format.

Foreword

Designing the Grey Grid for Information Society

The needs and demands of Information Society are in constant state of change and flux. Information overload, information loss, information-on-demand are among just a few of the many factors confronting information professionals, practitioners, and net-users on a daily basis.

To a great extent, grey literature is the cause of all this. For the past two decades grey literature has grown exponentially in relation to commercially published literature. The grey literature community realizes that while the challenges faced at the First International Conference on Grey Literature in 1993 may not have all been resolved, solutions today lay in a whole new order, on yet another scale and magnitude than ever before. GL10 seeks to address the challenges to grey literature that still remain, while dealing with even newer challenges and an infrastructure that can effectively integrate all. The conference title 'Designing the Grey Grid for Information Society' invokes an infrastructure, which must take into account social, political, and organizational factors. For these also impact system-to-system performance when dealing with the scale and diversity of information, data, document types, collections, and subject areas linked to grey literature. As such, interoperability becomes de facto a requirement in the design of the grey grid i.e. an infrastructure that can model and withstand the test of an ever changing Information Society.

15:00-15:30 Afternoon Break

15:30-17:00**CLOSING SESSION - REPORTS FROM CHAIRPERSONS, CONFERENCE EVALUATION, AND FAREWELL****Chair, Dominic Farace, Grey Literature Network Service, GreyNet, Netherlands**

Schedule for the Poster Presentations and Product & Service Reviews

Poster Presentations are scheduled on both days of the conference. Speakers will have the opportunity to briefly introduce themselves in the Main Hall (5 minutes) before proceeding to an adjoining conference room, where they will simultaneously present their posters in an informal setting. The format for Poster Presentations are equivalent to PowerPoint Presentations, which will be viewed by small groups of participants directly on the Speakers' laptops.

15:30-17:00

DAY ONE

EBSCO Product and Service Review / Rene Dales, EBSCO Publishing
Regional Sales Manager Databases Benelux

INIST Product and Service Review / Christiane Stock

SWETS Product and Service Review / **Anthony Hodge**
Marketing & Communications Executive - Region South

Grey Literature on Caste-based Minority Community in India / Jyoti Bhabal, SHPT School of Library Science; SNTD Women's University, India

Collecting Foreign Digital Grey Literature through Consortium in Korea Suhyeon Yoo, Kijeong Shin, and Heeyoon Choi, Korea Institute of Science and Technology Information (KISTI), South Korea

Knowledge and Use of Grey Medical Literature by Medical and Paramedical Staff at University/Research Associated Medical Institutions in Developing Countries
Emmanuel U. Onyekwelu, Joan Carlos, Rodriguez David, and Margarita Gonzalez
Royal Victoria Teaching Hospital, The Gambia

09:00-10:30

DAY TWO

The Knowledge Transformation in Products and Services: Grey Literature and the Thesis at PPGEF / Gerônimo Vanderlei Machado, Universidade Federal de Santa Catarina (UFSC), Brazil

Polish technologies online / Maciej Dominiak, Maciej Ossowski, Krystyna Siwek, and Krzysztof Lipiec, Information Processing Centre (OPI), Poland

Virtual Reading Rooms for Efficient Online Search and Access to Grey Literature / Aleksandr V. Starovoitov, Centre of Information Technologies and Systems of Executive State Authorities; Aleksandr M. Bastrykin, Yuri M. Bogdanov, and Leonid P. Pavlov, The Scientific and Technical Information Centre of Russia (VNTIC), Russia

Grey literature in VET and labour market / Chiara Carlucci, Monia De Angelis, and Silvia Mussolin; L'Istituto per lo sviluppo della formazione professionale dei lavoratori, ISFOL, Italy

GL Compendium, a unique current awareness resource in and for Grey Literature / Dominic Farace and Jerry Frantzen, GreyNet, The Netherlands

Opening Address

A Whiter Shade of Grey **The many shades in grey literature and** **how to improve findability**

Arie Jongejan,
CEO Royal Swets,
The Netherlands

Grey literature carries several different definitions, from a simple “anything that is not (yet) white”, and ‘white’ being any official and registered publication, to “any literature that is difficult to find”. In his keynote at GL10 entitled ‘A Whiter Shade of Grey’ Swets-CEO Arie Jongejan will point out how recent developments have helped to whiten large categories of grey literature.

The advent of WorldWide Web, the rise of institutional repositories, better metadata management, better web search and the increasing popularity and availability of open source material, have all helped to create whiter shades of grey literature.

At the same time, the growing overload of available information has not necessarily made the librarian’s life easier. It has created a new grey shade over many categories of what is essentially white literature, creating a greyer shade of white. How do librarians handle that?

Jongejan will explain how improved findability of literature in all its shades is core to the Swets strategy. In Swetswise, its electronic platform for library tools and subscription management facilities, librarians are supported in many ways to find the literature they need, from the Swetswise Titlebank to Swetswise Searcher. Swets is a partner in findability of literature.

Bionotes

Arie Jongejan was appointed Swets’ Chief Executive Officer in March of 2005. Recognized for his expertise in the publishing industry, Arie joined Swets following an impressive career at Elsevier, where he held a range of senior management positions. As CEO of Elsevier's Science & Technology Division, Mr. Jongejan was responsible for the commercial and technical innovation of ScienceDirect and Scopus, developing them into Elsevier's core business. <http://www.swets.com>

Keynote Address

WorldWideScience.org Bringing Light to Grey

Brian Hitson,
Associate Director OSTI-DOE,
United States

Brian Hitson is Associate Director for the U.S. Department of Energy's Office of Scientific and Technical Information (OSTI) in Oak Ridge, Tennessee. In this position, Mr. Hitson is responsible for international information exchange programs, administrative and financial management, cost-reimbursable activities, limited access information programs, and the digitization and preservation of a 1.2 million scientific document repository.

As part of his international responsibilities, Mr. Hitson coordinated the development of the global science gateway, WorldWideScience.org and the establishment of its multilateral governance structure, the WorldWideScience Alliance. He is Chairman and U.S. representative to the International Energy Agency's Energy Technology Data Exchange (ETDE), which manages the world's largest energy research, technology, and development database. He is also the U.S. representative to the International Atomic Energy Agency's International Nuclear Information System (INIS). In addition, he serves on the elected Bureau of the International Council for Scientific and Technical Information (ICSTI) as Chair of the Technical Activities Coordinating Committee. Mr. Hitson has a Bachelor of Arts degree in Economics and a Master's in Business Administration, both from the University of Tennessee.

Collection Development in a Grey World

Jennie Grimshaw and Elizabeth Newbold
The British Library
United Kingdom

The British Library has been collecting grey literature since the 1950s primarily in the sciences and social sciences. Over the last five decades the library has responded to and worked with the changing external information environment to develop and manage its collections. The last few years has seen rapid change in many areas with the proliferation of digital material and the flight to the web of much grey literature. Working in this environment poses interesting questions for libraries and librarians in their approach to collection development and collection management. In our paper we will explore some of the issues and practicalities that we are addressing as we continue to develop our collections for researchers in the sciences and social sciences. Drawing on our experiences we will discuss the following issues through a case study of report literature on dementia:

- How to identify and acquire material
- Challenges and practicalities of the legal framework and environment
- How our collections are changing and adapting including examples of where the changes in the make up of the collection are salient
- How to make the material accessible now and in the future

All collections are different, our users are not your users and our collections are not your collections, using examples from our collection and collecting practices, in our unique position as the national library of the United Kingdom, we hope to illustrate some of the common issues facing libraries and information professionals in maintaining and developing grey literature resources in the digital environment.

Bionotes

Jennie Grimshaw is curator of official publications and social policy collections at the British Library. As such she has a particular concern with the move of informal government publishing to the Web, and is involved in several projects aimed at its archiving and conservation in the UK, working with The National Archives, the National Libraries of Scotland and Wales, the London School of Economics Library and the Bodleian Library at Oxford.

Elizabeth Newbold - After completing a degree in applied sciences and an MSc in Information Studies Elizabeth started a career as an information professional specialising in scientific, medical and technical information provision. Elizabeth has worked in a number of organisations and specialist information units, providing information research services to researchers in both the public and private sector before moving to the British Library in 2003 to manage the science, technology and medicine (STM) collections. Currently leading the STM Content & Collections team for the British Library her work focuses on collection and content development strategies and policies. Her interest in grey literature has developed over the years from her experiences working in organisations that were both users and producers of grey literature.

LIBRARY HISTORY

How do these approaches affect our collecting?

- Currently looking at how these different approaches affect our collecting through a small case study of report literature relating to dementia.
- Why dementia?
 - Topical subject relevant to researchers in different fields
 - Spans the sciences and social sciences and requires information professionals in the BL to work together from different teams
- What are we doing?
 - Identifying organisations active in this field e.g. Government departments, research institutes and academia
 - Do they publish material and how do they publish it e.g. print only, e-only, print and e
- Identifying relevant material for the collection:
 - Checking selections against the BL catalogue to see if already held
 - Selecting like websites for web-archiving
 - Prioritising organisations to approach for voluntary deposit

Ongoing but will review the methodology to see if it can be used for other subjects and if it is successful in establishing mechanisms for selecting and acquiring UK grey literature

7

LIBRARY HISTORY

The tip of the iceberg

The collection will continue to evolve and develop and collecting practices will adapt to address the changes.

Grey literature has always been difficult to collect and manage and will continue to be so. But collection development in a grey digital world provides opportunities for:

- Creating rich and varied collections
- Developing partnerships and collaborations
- Acquiring new skills
- Enhancing access to the content for researchers

It's the tip of the iceberg there is still much to be explored!

Grey Literature in the Czech Republic

Petra Pejsova, Martina Pfeiferova
State Technical Library, Czech Republic

Our contribution summarizes and describes activities concerning grey literature in the Czech Republic. The managing organisation of the activity is the State Technical Library (henceforth the STL); in the past, it was the STL, who was collecting, publishing and submitting grey literature into the SIGLE system. Moreover, the STL was the representative of the Czech Republic in the EAGLE. Now, EAGLE being extinct, there is no coordinated collection of grey literature on the national level since 2005.

The STL makes up the role of the Czech National Library, which under the National Digital Library project, aims at accessibility of wide spread published documents ("white literature"). On the other hand, the STL intends to deal with literature not acquired through normal bookselling channels (grey literature) and initiated a project for grey literature retrieval.

The project—National Repository of Grey Literature (henceforth NRGL)—has been supported by the Ministry of Culture. Its main objective is formation of a digital repository of grey literature in the Czech Republic. The project aims at gathering metadata and possibly full texts of grey documents in the field of education, science and research. NRGL shall solve the typology of documents gathered, metadata formats, persistent identifiers, intellectual property issues, soft- and hardware support, forming a network of collaborating institutions etc.

There has been established a close collaboration with representatives of Czech universities, who face the issue of storing university qualification theses which is one of the segments of typology of documents collected by NRGL. The National Registry of University Qualification Theses shall become a component of NRGL. The STL has also got in touch with further issuers of grey literature in the Czech Republic, in particular research institutes of the Czech Academy of Sciences, the institution covering a major part of production of grey literature in the segment of research and development.

NRGL should make it possible to research the data on grey literature in the Czech Republic at one spot with a single interface, as well as to retrieve the information on the owner of the document and if possible, the full text of the document, either in electronic form or through the contemporary network of libraries (interlibrary loan, Virtual Polytechnic Library, Document Delivery Service etc.).

The NRGL project does not assume retrospective digitalisation of grey literature documents. However, we intend to make NRGL be a trustworthy repository. The aim of the project is to provide services not to the NRGL contributors only, but also to the widest public. The STL has based the project on practice of universities which had already experience with local repositories. The entire NRGL project is consulted with the National Library of the Czech Republic as a part of the National Digital Library project.

Towards an Institutional Repository of the Italian National Research Council: A Survey on Open Access Experiences

Daniela Luzi, Rosa Di Cesare, Roberta Ruggieri and Loredana Cerbara
Institute of Research on Population and Social Policies, IRPPS-CNR, Italy

In Italy Open Access Initiatives (OAI) have been primarily promoted by Universities and intra-university consortia, which almost unanimously adhered to the Berlin Declaration. At the moment there are about 30 operational OA archives, which demonstrates a constant increase of these information systems. The National Research Council (CNR), one of the largest governmental research institutions in Italy, has not taken any official position towards open access yet. However, the scientific and organisational autonomy of its 107 institutes covering science and technology, life sciences as well as social sciences and humanities, does not exclude that some of CNR institutes have developed their own systems to make their scientific production publicly available. Moreover, past and present co-operative experiences between CNR libraries ranging from SIGLE participation to actions supporting common access to digital resources outline a shared and value added background useful to support and diffuse OAI.

This paper presents the results of a survey promoted by a group of CNR librarians and researchers (hereafter called "supporter group") which has the aim of acquiring information on the different experiences and activities carried out within CNR institutes to implement OA.

Our principal objective is to identify documentation, organization as well as technological resources that could be the basis for a future development of a comprehensive CNR Institutional repository. In particular the survey intends to:

- Acquire information on OA archives already developed and/or planned by single CNR institutes, including data of:
 - Principal actors participating in archival process,
 - Types of documents collected,
 - Availability of full-text documents,
 - Software used.
- Verify whether other types of databases have been developed to make the Institute's scientific production freely available (for instance research activity web pages, library catalogues, etc.) and analyse their characteristics.

The survey started in March 2008 and foresaw the following phases:

- Setting up of a "supporter group";
- Development of a questionnaire;
- Identification of the questionnaire target (CNR Institutes, sections, units);
- Questionnaire submission;
- Data collection and analysis of results.

The semi-structured questionnaire is composed of 14 questions within two different sections that reflect the survey objectives: questions 1-9 are related to the characteristic of the developed OA archive, questions 10-14 concern information sources on the Institute's scientific production made freely available in other forms.

Expected results

At the moment we have received about 60% of responses from CNR institutes and about 50% from its sections, which makes the results of our still ongoing survey very promising. These results will constitute the basis for a feasibility study aiming to support a comprehensive CNR Institutional repository, based on the integration of already developed open archives as well as on the development of guidelines that could orient the design of new interoperable systems.

The network approach, which has an important role in supporting this survey, may also constitute an example of best practice for the construction of a participative and pro-active consensus on OAI.

Bionotes

Daniela Luzi is researcher of the National Research Council at the Institute of research on populations and social politics. Her interest in Grey Literature started at the Italian national reference centre for SIGLE at the beginning of her career and continued carrying out research on GL databases, electronic information and open archives. She has always attended the International GL conferences and in 2000 she obtained an award for outstanding achievement in the field of grey literature by the Literati Club. Email: d.luzi@irpps.cnr.it

Rosa Di Cesare was born in Civita d'Antino (AQ) in 1952 and graduated from "La Sapienza" University in Rome in 1982. She received her diploma in Librarianship from the Vatican Library in 1996. She worked in the Central Library of National research council (CNR), where she started to become involved in research activity in the field of Grey literature (GL). Member of the Technical Committee for the SIGLE database from 1995 to 2001, she is presently responsible for the Library at the Institute of research on population and social policies (IRPPS) of the National research council. Her studies have focused on citation analysis and on the use of GL in scientific publications. Email: biblio.irpps@irpps.cnr.it

Toward an Institutional Repository of the Italian National Research Council: A survey on Open Access experiences

Daniela Luzi, Rosa Di Cesare, Roberta Ruggieri, Loredana Corbani
Consiglio Nazionale delle Ricerche,
Istituto di Ricerche sulla Popolazione
e le Politiche Sociali
mailto:{d.cesare, d.luzi, r.ruggieri}@irpps.cnr.it

Objectives

Identify documentation, technological resources, organizational contexts to promote a future comprehensive CNR's IR

Acquire information on:

- already developed and/or planned OA archives
- other types of web distribution for CNR scientific production

- organization (i.e. stakeholders, information flow, services)
- content (i.e. types of information available)
- technology

Under the perspective of integrating resources and systems

Methods

Survey design

- Setting up of a "supporter group"
- Development of a questionnaire
- Identification of the survey units

Questionnaire submission and collection

Data analysis

- Verification of data consistency
- Adoption of a "restricted" definition of IR
- Analysis of results

Survey numbers

Survey numbers	CNR		
	Research Units	Received Questionnaire	Coverage
	Nb.	Nb.	%
Institutes	107	93	87
Sections	187	67	36
Total	294	160	54

Distribution of respondents by Department (%)

Distribution of respondents to the question: "Does your Institute have a local IR to collect the publications produced by its researchers?"

Definition of IR (DRIVER):

- Containing research output from contemporary researchers
- Institutional or thematic
- OAI-PMH compliant

... Inside the "error" responses

From the Institute's web sites:

- Searchable database
- Searchable database + abstract
- Browsing of publication list + abstract
- Browsing of publication list + abstract + full text
- Link to "Gestione Istituti" (central DB of CNR scientific production)
- Link to the publisher website

Distribution of document type in local IRs by access modalities (%)

Software used to develop local IRs

Management and Availability of CNR scientific production in other forms

Distribution of respondents to the question: "Is the Institute's scientific production catalogued?"

Distribution of respondents to the question: "Is the Institute's scientific production freely available in other types of digital archives?"

77% of CNR Institutes do provide access to their scientific production via freely accessible web resources

Who inserts data in the "Central DB of CNR scientific production?"

Conclusions

Questionnaire results

- Few local OAI compliant IRs
- The majority of CNR Institutes makes its scientific production freely available on web
- Libraries are engaged in IRs management as well as in inserting the institute's scientific production in their digital catalogues
- Different actors participate to the diffusion of scientific production

Good news

- Scientific content electronically available
- Authors are used to provide the list of their papers yearly
- Enlargement of the "supporter group" and commitment to promote OA

Future effort

- Integration of information resources and systems into a common infrastructure
- Development of a organizational network to support the management and culture of OA

SCIENTIFIC AND TECHNICAL DOCUMENT DELIVERY

**Find and receive the information you need
in a simple and easy way.**

With INIST-CNRS, the leading French scientific document delivery center, you are certain to obtain a copy of the majority of the documents you need in Science, Technology, Medicine, Humanities, and Social Sciences.

AN EXCEPTIONAL MULTIDISCIPLINARY DOCUMENT COLLECTION

The collections of INIST and its international network of partner libraries cover the core literature published worldwide in Science and Technology.

INIST's own collection contains 26 000 French and international periodical titles, including 8 000 current subscriptions, as well as a significant number of scientific reports, conference proceedings and doctoral dissertations.

ORDERING AND DELIVERY, TAILOR-MADE SERVICES

INIST offers a complete range of tailor-made services for you to locate, order and receive copies of the documents you need.

If you are an occasional user, the ArticleSciences search engine is available to order an article and pay for it online with a bank card. If you are a frequent user, after opening an account at INIST, you can use an interface (<http://services.inist.fr>) that offers a whole range of ordering and payment methods tailored to your needs.

For more information: <http://docdelivery.inist.fr>

Grey literature in French Digital Repositories: A Survey

Joachim Schöpfel, University of Lille 3, France
Christiane Stock, INIST-CNRS, France

The impact of open archives on the availability and selection of scientific and technical information is growing. Yet, there is little empirical evidence on the deposit and processing of grey literature in digital repositories.

The purpose of this communication is to provide a survey on grey literature in French open archives, e.g. institutional and subject-based digital repositories.

The survey is based on a selection of 40 representative French digital repositories. The different archives are selected through national and international registries of OAI repositories, e.g. *OpenDOAR*, *ROAR*, *BASE*, *EPrints*, *DSpace*, *University of Illinois OAI-PMH Data Provider Registry*, *Scientific Commons*, *Webometrics*. The selection follows a defined set of criteria (located in France, living archive, size). The repositories are shortly described (type of repository, scientific domain, software, size, language, institution).

Five aspects are analysed for each digital repository:

1. typology of grey documents (in particular, theses and dissertations, reports, conference proceedings, working papers, courseware),
2. part of grey literature in the whole archive (in %),
3. specific metadata related to grey literature,
4. quality control and policies (evaluation, validation),
5. conditions of access to the full text.

Whenever possible, data on development (evolution of deposit) and usage (statistics of access and downloads) are added. These information and data are linked to the characteristics of the repositories mentioned above, and specific features of grey literature are discussed.

Furthermore, the question if the New York definition of grey literature applies to the content of digital repositories is discussed.

The communication provides an overview of the preservation and dissemination of grey literature in French digital repositories, contributes to the discovery of French grey literature and open archives, and moves forward the debate on the future of grey literature in the environment of digital repositories.

Bionotes

Joachim Schöpfel obtained his Ph.D. in psychology from the Hamburg University in 1992. During his studies in psychology, he participated in research on bilingual children of Turkish immigrants in Hamburg, of the German minority in Denmark, and in a French-German High School in Versailles, France. From 1991 to 2008, he worked at the French Institute for Scientific and Technical Information (INIST-CNRS) in different positions in database production and library management, at last as head of the e-publishing and document supply department. During the same time, he was lecturer at the University of Nancy. At present, he is senior lecturer in information and communication sciences at the Charles de Gaulle University of Lille 3. He published on GL, document delivery, digital libraries, scientific publishing, usage statistics and professional development.

INIS Grey Literature - A Trusted Nuclear Full Text Repository

Seyda Rieder
International Atomic Energy Agency, IAEA, Austria

In every field of science, a reliable information system is essential to identify, synthesize, disseminate and preserve the information resources and make them easily accessible to current and future generations.

The International Nuclear Information System (INIS) is the system that covers literature published worldwide in the area of peaceful uses of nuclear sciences and technology. The INIS bibliographic database and the unique grey literature full-text collection have always been the two major products that serve the nuclear community. INIS fulfills this challenging task based on strong international cooperation among its member states and member organizations.

From the very beginning, INIS understood the significance of collecting, preserving and providing access to grey literature that is not available through commercial channels. Its availability for future generations is crucial.

Over the years, INIS focused on rapid developments in technology and fulfilled users' expectations by upgrading its information systems and enhancing the technical infrastructure. Prior to 1997, the INIS grey literature full text collection was stored on microfiche; later digital technology was introduced. Recognizing the advantages of direct online access to electronic files, INIS has recently started a major project converting the full text collection from microfiche to digital medium. The result of this project will be a full-text searchable, reliable and trustworthy database containing over 700 000 documents.

In view of the importance of capturing and transferring the nuclear knowledge and expertise to next generations, IAEA and Member States have initiated programmes to manage and preserve knowledge within the nuclear community. From the very beginning, INIS has been deeply involved in long-term storage of, and access to, nuclear knowledge and has proven to be instrumental and efficient in this area, complying with international standards and following digital preservation guidelines of authoritative institutions, such as Cornell University.

Currently, there is a wide range of digital preservation initiatives that INIS leads both at the IAEA and in Member States. INIS will continue to play a significant worldwide role in nuclear knowledge preservation and management activities and will further grow as the reliable reservoir of nuclear knowledge for future generations.

Bionote

Seyda Rieder has worked at the International Nuclear Information System of the International Atomic Energy Agency (INIS/IAEA) for over 30 years. As leader of the Database Production and Imaging Group she is in charge of the quality control and production of the INIS bibliographic and grey literature database. In this capacity, she is also responsible for the maintenance and revision of INIS guidelines and rules related to bibliographic description, record structure, standardization and exchange of full text literature, and is an instructor in capacity building and training activities. She manages a number of IAEA/INIS digital preservation projects in cooperation with Member States. Ms. Rieder is the vice-chair of the ISO3166 Maintenance Agency (International Standard for the Representation of Names of Countries and their Subdivisions) and the representative for the IAEA. Email: S.Rieder@iaea.org

Recommendations for finding the gold: Optimizing efforts to identify the Grey Literature on Public Health Effectiveness

Maureen Dobbins and Paula Robeson
Health-evidence.ca; McMaster University, Canada

Goal: Research and other literature related to the development of a comprehensive methodology for searching the grey literature for public health evidence is scarce. This project aimed to develop and test a methodology for identifying, retrieving, and selecting unpublished syntheses evaluating the effectiveness of public health interventions; assess the quality appraisal of the reviews found; and make recommendations related to the further development of an efficient grey literature search strategy.

Method: Literature search and key informant interviews informed the development of a search strategy. The proposed strategy was pilot tested by searching for reviews related to physical activity promotion among children and youth. Quality assessment was conducted on retrieved reviews and refinements were then made to the piloted methodology for a comprehensive search strategy based on the test results.

Project Costs: The Public Health Agency of Canada contributed \$50,000 towards this \$100,000 project.

Results/Conclusions: Pilot testing of the proposed grey literature methodology resulted in 68 documents, of which 60 were synthesis documents. Following secondary relevance testing, critical appraisal was conducted on 16 documents - 13 systematic reviews and three clinical and/or best practice guidelines. Eleven documents were inaccessible. Of the systematic reviews, eight were appraised to be methodologically strong, one moderate, and four weak. Only one guideline was recommended for use in guiding practice and program development.

The identification of systematic reviews from the published and grey literature is an important process in the provision of the best available research evidence to guide decision making in public health, health promotion, and population health. There is considerable international interest in the development of an effective feasible strategy in this regard. Depending on the available time, human and financial resources, the key steps to accessing the grey literature for public health synthesis evidence include (in order of priority):

- Searching the databases of organizations that produce and/or house systematic reviews and other evidence syntheses for existing, in process, and planned reviews
- Contacting key individuals (systematic review producing organizations and other content experts)
- Connecting with issue-specific and relevant funding organizations in Canada, the US, the UK, and elsewhere
- Searching the websites of Federal/Provincial Governments in Canada; relevant agencies within national government in US, UK, and elsewhere
- Searching the Web using various search engines
- Contacting Universities, University Departments (content), and other research organizations
- Contacting Regional Health Authorities and public health units in Canada

Bionotes

Maureen Dobbins, RN, PhD is an associate professor in the School of Nursing at McMaster University. Currently she is career scientist of the Ontario Ministry of Health and Long-Term Care. Her research efforts have sought to understand knowledge transfer and uptake and evidence-informed decision making among public health decision makers in Canada. Studies have included: identification of barriers and facilitators to research utilization; understanding the information needs of public health decision makers at the local, provincial and federal level; evaluating the use of systematic reviews in provincial policies; exploring where research evidence fits into the decision-making process; evaluating the impact of knowledge transfer strategies, and exploring knowledge brokering in public health units in Ontario. On March 10, 2005 she launched the web site www.health-evidence.ca. This registry houses all reviews evaluating the effectiveness of public health and health promotion interventions published since 1985. The value of this registry is that it meets the need for a single source of high quality effectiveness evidence in public health/health promotion; a need clearly articulated by Canadian public health decision makers.

Paula Robeson, RN, MScN earned her BN from Memorial University of Newfoundland (1987) and MScN from the University of Ottawa (2000). She has a breadth of nursing experience from across Canada in primary health care, public health, health promotion, and population health. Paula is employed at McMaster University as a Knowledge Broker (KB) with both health-evidence.ca and the National Collaborating Centre for Methods and Tools (NCCMT), one of six public health collaborating centres funded by the Public Health Agency of Canada. In these KB roles Paula is responsible for knowledge transfer and exchange with public health decision makers across Canada to assist them to develop and support evidence-informed practice, programs, and policies in their organizations and communities. To that end, Paula was the Knowledge Broker with a 3-year RCT, Evaluating the Evidence on Knowledge Brokers: Comparing Strategies to support Decision-Makers' Translation of Evidence on Physical Activity and Healthy Body Weights. Through the NCCMT, Paula is coordinating the development of a national network of public health managers.

Results

Literature search + interviews

The grey & PH

- Impact unknown (Howes, 2003)
- Evidence re effective PH interventions (Turner et al., 2000)
 - diverse formats, content, & audiences
 - largely grey
- Frequently sought/used
 - sharing 'best practices'
 - decision making
 - first/only source of PH effectiveness evidence

GL10
December 9-11, 2008

Results

Literature search + interviews

The grey & PH

- Few systematic review (SR) organizations with a Canadian PH focus
- Need for increased capacity
 - effective efficient searching
 - critical consumption of information
 - assessing evidence quality/relevance
 - adapting evidence for local use
 - use of syntheses in evidence-informed decision making (EIDM)
- International interest

GL10
December 9-11, 2008

Results

Literature search + interviews

Grey lit access

- Not all worth collecting but much missed
- No Canadian grey literature database
- Centralized documentation centres emerging
- Search protocols
 - vary in process, precision, outcomes
 - none specific to SRs
- Resource implications (technological, \$, human)
- Information specialists can help

GL10
December 9-11, 2008

Results

Initial proposed methodology

- Reference lists of published studies
- SR & guideline organizations
- Internet search engines
- Websites of & key contacts in
 - issue-specific & funding organizations
 - governments & agencies
 - academic/research organizations
- Content experts
 - organizations
 - networks

GL10
December 9-11, 2008

Results

Initial search

GL10
December 9-11, 2008

Final proposed methodology

- Systematic review-producing/housing orgs
- Guideline-producing/housing orgs
- Contact with experts and issue-specific orgs in the content area
- Government websites
 - national
 - provincial/territorial/state

GL10
December 9-11, 2008

Highlights

- Very time consuming
- Difficulties with access
- Strategies recommended
 - SR-producing/housing orgs
 - guideline-producing/housing orgs
 - content experts
 - government agencies
 - collaboration with health information specialist
- Caution required - inadequate quality

GL 10
December 9-15, 2008

Highlights

- Very time consuming
- Difficulties with access
- Strategies recommended
 - SR-producing/housing orgs
 - guideline-producing/housing orgs
 - content experts
 - government agencies
 - collaboration with health information specialist
- Caution required - inadequate quality

GL 10

Harnessing the Power of the Veterinary Grey Literature

Joe Jaros and Esther Carrigan
Texas A&M University [et al.], United States

Problem/Goal: A significant portion of the literature of veterinary medicine is grey literature. Although three of the national libraries of the United States (National Library of Medicine, National Agricultural Library and Library of Congress) each cover some portion of the veterinary literature, there is no comprehensive plan to collect, ensure access and preserve the veterinary grey literature.

Research Methods/Procedure:

Focus Group: In September 2007, seven veterinary librarians from across the United States met at Texas A&M University for a 3-day session to discuss issues surrounding the veterinary grey literature, brainstorm ideas of potential remedies, and create the beginnings of an action plan. This group of librarians represented several different academic veterinary libraries and the American Veterinary Medical Association (AVMA). They now function as the Steering Group for this cooperative venture that will extend beyond the United States to reach all international libraries serving veterinary schools accredited by the AVMA.

Survey: In March 2008 a survey on veterinary collection practices, emphasizing archives and grey literature handling, was sent to librarians at all AVMA accredited schools of veterinary medicine. Response rate for survey completion was nearly 75%.

Costs Related to the Project: \$20,000 USD

Anticipated Results/Conclusions:

Based on the information gathered from the focus group and analysis of survey data, create and implement an action plan. Elements of the plan include: identify new partners/collaborators; acquire external funding; communicate widely and make disciples; coordinate preservation/digitization projects which leverage institutional repositories of participant institutions. The current environment, with increasing opportunities for digitization of information resources and the growth of institutional repositories in universities, provides the foundation and potential solution for enhancing access and preservation of veterinary grey literature.

Bionote

Joe Jaros received a B.A. and an M.A. from the University of Texas at Austin, Texas. His M.S. in Library and Information Science is from the University of North Carolina at Chapel Hill. He spent five years working for the Colonial Records Project for the North Carolina State Archives in the United Kingdom. He has since held a number of different positions at Texas A&M University in College Station, Texas. Since 1990, he has been associated with the Medical Sciences Library at that University, and is currently the Veterinary Historical Collections Librarian. He has made numerous presentations on information services and published in a number of library and information science related journals. His interest in grey literature began with reference work for the veterinary college at Texas A&M and has become more focused in his archival and preservation work. Email: jjaros@medlib.tamu.edu

HARNESSING THE POWER OF THE VETERINARY GREY LITERATURE

- 1997 study of Williams and Croft
- 2003 bibliometric study by Pelzer and Wiese
- Acquisition statistics from selected sites FY 2006 and FY 2007

Library of Congress
National Library of Medicine
National Agricultural Library

- Currently 28 veterinary colleges in United States and Canada
- 41 have disappeared
- Of those 41, almost 50% have no extant publications

Plan for the Future: Rescue the Past, Restore, and Preserve

- Development of Focus Group
 - Seven veterinary libraries involved
 - Chosen for specific reasons
 - Met at Texas A&M University; additional meetings held at conferences
- Survey
- Creation of Steering Group
- Action Plan

Survey of Veterinary Libraries

- American Veterinary Medical Association
- Approximately 75% response rate
- Few actively acquire grey literature
- Preservation programs
- Digitization programs
- Institutional repositories
- Implications for Action Plan

Action Plan

- Communicate
- Raise awareness
- Mentoring
 - Meetings, reports, publications
- Digitization and metadata
 - Two institutions partner on grant for demonstration project
 - Washington State University hosting ICAHIS publications
- Website under development

Outcomes

- Creation of Steering Group
- Communication
- Grant Proposals
- Research Projects

Future Plans and Hopes

- Locate
- Access
- Preserve
- Educate
- New Collaborations and Partners

Information Literacy and Librarians' Experiences with Teaching Grey Literature to Medical Students and Healthcare Practitioners

Yongtao Lin, Tom Baker Cancer Centre and Marcus Vaska,
Health Sciences Library, University of Calgary, Canada

The concept of information literacy, which describes the knowledge and skills required in all contexts (i.e. educational sectors, the workplace), as well as in people's everyday lives in today's information rich society, was introduced in the United States in the early 1970s (Limberg et al. 2002; Lloyd et al. 2008). According to the Association of College and Research Libraries Information Literacy Competency Standards for Higher Education (2000), it has been concluded that an information literate individual is able to determine the extent of information needed, access information efficiently, evaluate information and its sources critically, and use information effectively. Information literacy skills become even more central to meeting the requirements of dealing with complexity and large volumes of information from grey literature.

Our interests as health sciences librarians and thereby the focus of our poster presentation lie in portraying the unstructured nature of grey literature and discussing methodologies and approaches towards teaching this elusive material to those in the health sciences sector, particularly medical students and healthcare practitioners, clients we serve within the Health Information Network Calgary. The Network was formed in 2005 through fee-for-service contracts between the University of Calgary and two partners, the Calgary Health Region and the Alberta Cancer Board. An integrated health knowledge service is provided for healthcare practitioners, staff, patients, and families from Knowledge Centres at major acute care sites, with the University of Calgary Health Sciences Library serving as the Network hub. In both medical school contexts and workplace settings, such as acute care facilities, information literacy is closely associated with the ability to acquire and develop competencies to enable individuals to think critically and use information appropriately (Lloyd 2005).

It is becoming widely recognized that giving the end user knowledge related to research information, widening his/her horizons, and implementing critical thinking and carefulness in using information, is more essential than instruction on how to search various information resources. In our own teaching we employ case-based problem-based learning, described by L. Carden, P. Willingham and D. Bibb (2001). We have found this method more effective, active and more student-centered, as it falls in line with a general trend in education, which focuses on making our users independent lifelong learners, and also fits our service goals within the Health Information Network in meeting the needs of medical students and healthcare practitioners.

What We Have Discovered & What We Will Discuss

- The Value of Information Literacy
- The Impact of Grey Literature on Information Literacy
- Information Literacy in a Medical Context
- Grey Literature in the Health Sciences
- Teaching Grey Literature Using Problem-based Learning (PBL)

Lin & Vaska, December 8, 2006

The Value of Information Literacy

"Not having the information you need when you need it leaves you wanting. Not knowing where to look for that information leaves you powerless. In a society where information is king, none of us can afford that."
(Lois Harrowitz, 2007)

The Information Literate Individual:
"one who is able to recognize when information is needed and have the ability to locate, evaluate, and use effectively the needed information"
(Webber and Johnston, 2000, p. 382)

Our goal: allow the user to take control of his/her own learning

Lin & Vaska, December 8, 2006

The Impact of Grey Literature on Information Literacy

- Grey literature must coincide with published material when conducting research, particularly systematic reviews
 - **IMPACT:** limit bias.
- Learners learn more when searching for grey literature!
 - **IMPACT:** use critical thinking to apply and assess what is retrieved.
- "the unsung hero, the foot soldier, the foundation of the building"
(Moya Mason, 2008)
- **IMPACT:** Our goal as information professionals is to supply our clients with all of the skills necessary to experiment with various search tools and critically analyze what they have found.

Lh & Vasek, December 8, 2006

4

The Grey Literature Explosion: Information Literacy and Technology

- Previously hidden documents can be more easily retrieved; instantaneous access to information in both the physical and virtual world
- There is always a purpose to searching; grey literature is another avenue to make a search more effective

Lh & Vasek, December 8, 2006

5

Information Literacy in a Medical Context

- 1989: Information literacy recognized in a medical setting
- Collaboration between information professionals and faculty members is key
- The 'discerning consumer':

Lh & Vasek, December 8, 2006

6

Grey Literature in the Health Sciences

- As a primary source of information, grey literature was cited in the medical journals that provided reliable data on research in progress. (Alberani, et. al., 1990)
- Technical reports prevailed over other types of grey literature.
- Expert searching in public health requires the ability to identify and search for resources beyond the electronically available published literature. (Alpi, 2005)

Lin & Vasek, December 8, 2006

7

Grey Literature in the Health Sciences (Continued)

- Inclusion of grey literature in meta analyses
- Grey literature and systematic reviews

Roles of Health Science librarians in locating, retrieving, organizing and teaching grey literature.

Lin & Vasek, December 8, 2006

8

Teaching Grey Literature

- Some of the valuable search strategies we incorporate in our teaching sessions include:
 - Multiple medical databases
 - Citation index searches
 - Research registries
 - Journal hand searches
 - Contact with organizations and associations
 - Presentation abstracts and conference proceedings
 - Internet searches

Lin & Vasek, December 8, 2006

9

Using PBL in Teaching Grey Literature

Outcomes of Problem-based learning:

- Capability to think critically
- Ability to find, evaluate and use resources
- Ability to work collaboratively in teams
- Likelihood of applying to real life
- Development of lifelong learning skills

Information Literacy Standards:

- Determine the extent of information needed
- Access the needed information
- Evaluate information and its sources critically
- Incorporate information into one's knowledge base
- Use information effectively
- Understand other issues relating to the use of information

Lin & Vassak, December 8, 2006

10

Using PBL in Teaching Grey Literature (Continued)

• The process of applying PBL towards a one shot information literacy instruction session:

- Lesson planning with well-defined learning goals
- Problem development to engage in discussions and build connections to previously learned concepts and material
- Schedule keeping
- Team creating in PBL
- Role changing from a lecturer to facilitator and coordinator

Lin & Vassak, December 8, 2006

11

Rewarding Experience in Using PBL in Teaching Grey Literature

- Gain insight into the structure of our end users' understanding of grey literature
- Provide the experience in learning a topic on one's own and applying it to real-world situations

Lin & Vassak, December 8, 2006

12

Grey Literature and Development: The Non-Governmental Organization in Action

Lynne Marie Rudasill
University of Illinois at Urbana-Champaign, United States

Traditionally, the non-governmental organization working in economic and sustainable development has been viewed as a trusted source for research and information on specific topics and populations. With the advent of the World Wide Web, many of these organizations are working to make their expertise available to a large number of users. This study surveys non-governmental organizations working in several areas of economic and social development to ascertain what types of information they are making available on the Web, What types of grey literature are being made available electronically by these organizations? What types of information are only available in print? How are they organizing this information? What resources are they using to disseminate this literature?

The survey looks at the electronic production, collection, and dissemination of information by non-governmental organizations in developing and developed nations. Resources such as press/news releases, reports, books, bulletins, and journals are calculated for each organization at individual websites. The results of an electronic survey of other materials held by this set of organizations will also be reviewed.

It is expected that the World Wide Web now serves the purpose of the traditional vertical file in which print copies of non-governmental organization materials used to be filed. It is also assumed that the materials on the Web serve only as the tip of the iceberg as far as the production of information by the non-governmental organization. The impact this might have on the organization's ability to serve as a point of expertise in policy decisions will be explored.

Bionote

Lynne Marie Rudasill holds a Master's Degree in Library and Information Science from the University of Illinois, with additional studies in political science from Illinois State University. She currently serves as Global Studies Librarian and subject specialist in political science and speech communication at the University of Illinois where she is an Associate Professor of Library Administration. Her current research is in the area of information use and production by non-governmental organizations and the archiving of grey literature. She continues her work in web usability and accessibility as well.

The Value of Information Literacy

"Not having the information you need when you need it leaves you wanting. Not knowing where to look for that information leaves you powerless. In a society where information is king, none of us can afford that."
(Lois Harrowitz, 2007)

The Information Literate Individual:
"one who is able to recognize when information is needed and have the ability to locate, evaluate, and use effectively the needed information"
(Webber and Johnston, 2000, p. 382)

Our goal: allow the user to take control of his/her own learning

Lin & Vaska, December 8, 2006

Structure of Disclosure

- First Disclosure – primary literature, book, thesis, article, presentation
- Secondary Disclosure – reviews, bibliographies, indexes, abstracts, summaries, digests, guides
- Tertiary Disclosure – reference works, popular synthesis

1

Communication & Mass Media Complete™

Available via EBSCOhost®

- Cover-to-cover ("core") indexing and abstracts for over 350 journals, and selected ("priority") coverage of over 200 more, for a combined coverage of over 550 titles
- Includes full text for more than 230 core journals
- Many major journals have indexing, abstracts, PDFs and searchable cited references from their first issues to the present (dating as far back as 1915)
- Provides a sophisticated Communication Thesaurus and comprehensive reference browsing (searchable cited references for peer-reviewed journals covered as "core")

Communication & Mass Media Complete™ provides the most robust, quality research solution in areas related to communication and mass media. CMMC incorporates *CommSearch* (formerly produced by the National Communication Association) and *Mass Media Articles Index* (formerly produced by Penn State University) along with numerous other journals to create a research and reference resource of unprecedented scope and depth in the communication and mass media fields.

Grey Literature on Caste-based Minority Community in India

Jyoti Bhabal

SHPT School of Library Science; SNDT Women's University, India

Problem/Goal: In India, caste system is very strong even in the 21st century. From ages the backward communities were suppressed at many fronts. These backward communities include Scheduled Castes (SC), Scheduled Tribes (ST), Nomadic Tribes (NT), and Other Backward Classes (OBC). Each category is further divided into sub-categories. Amongst all OBCs are better in their socio-economic, socio-cultural position. Earlier the SCs and STs were the most oppressed class. Numbers of studies were undertaken on SC/ STs focusing on various issues such as health, education, employment, political participation, socio-economic status, etc. Through 1980s and 90s many research, projects, and government publications have generated information regarding the above mentioned aspects.

This paper will survey libraries of Mumbai to review the grey literature available in different formats pertaining to the various issues of these minority communities.

Research Method: Literature review of projects, thesis and dissertations, government publication, working papers, etc. available in libraries of Mumbai will be conducted.

Result: Even after 60 years of Independence, caste based minority communities have not yet achieved equality with the upper class. Government as well as NGOs is/are taking initiative in empowerment of such minorities. Numbers of government schemes and policies have been implemented. Several studies have been undertaken to evaluate the success of these schemes and policies and acts.

This research is surveying seven libraries in the city of Mumbai to assess the types and amount of grey literature available pertaining to the caste-base minorities. There are reports, research studies, thesis and dissertations, working papers, government publication, etc.. The way this literature is acquired, organized and made available to the potential users, the use of the Internet in dissemination is also discussed. While most of these documents are in English, there are few studies in Marathi and Hindi.

The study will also highlight the measures taken by these libraries to promote circulation of these documents as many of these documents delineate policy decision of the Government and the impact of such decisions.

Bionote

Jyoti Bhabal - Working as a Lecturer at SHPT School of Library Science, SNDT Women's University, Mumbai since 2000. She is Bachelor of Commerce, Masters in Library and Information Science and currently pursuing her PhD in Library and Information Science on 'Information Needs of Reserved Category Teachers in Colleges and Universities'. She has conducted minor research project on 'Library and Information needs of Reserved Category PG students of SNDT Women's University'. Her primary interests are 'Library Use and User Studies', 'Library Design' and 'Caste-Based Minority Issues'. At present she is teaching 'Library Management' and 'Subject Access to Documents' at Bachelor of Library and Information Science course. Email: jyotibhabal@gmail.com

Objectives

- To find the grey literature available on various issues of CBM in the seven libraries of the city of Mumbai
- To understand the post-acquisition life cycle of grey documents on CBM in these libraries.
- To know the effort/ measures taken by the libraries to enhance the use of grey literature on CBM issues

4

Sample

7 Libraries included in the study were:

- SNDT Women's University Library (SNDT Library)
- Jawaharlal Nehru Library of University of Mumbai Library (MU Library)
- The Aditya Birla Memorial Library of Nirmala Niketan College of Social Work (NNCSW Library)
- Central Library of Indian Institute of Technology (IIT Library)
- Library of International Institute of Population Studies (IIPS Library)
- Sir Dorabji Memorial Library of Tata Institute of Social Science (TISS Library)
- Indira Gandhi Institute of Development and Research Library (IGIDR Library)

5

Methodology

- Questionnaire- Life cycle of GL on CBM
- Catalogue Search- GL collection on CBM
- SPSS software- Analysis and Findings

Collecting Foreign Digital Grey Literature through Consortium in Korea

Suhyeon Yoo, Kijeong Shin, and Heeyoon Choi
Korea Institute of Science and Technology Information (KISTI), South Korea

Grey literature is occasionally the first and sole source for specific research topic. It may contain comprehensive, concrete, and up-to-date information on research findings. Despite the importance of grey literature, it is often neglected to be dealt with one of major resources in libraries because it has historically been difficult to identify and obtain.

In case of conference proceedings, it is simpler to obtain in libraries than the other types of grey literature such as e-mails or preprints because it has a certain possibility of publication. There can be two simple ways of obtaining conference proceedings in libraries. The first one is to receive the materials directly from the researchers who participate in the conference. The other one is to subscribe published conference proceedings. This is a much easier way for libraries to build collection.

Most libraries and information centers in Korea have subscribed foreign digital resources including conference proceedings through a group buying consortium called KESLI(Korean Electronic Site License Initiative). It makes scholars get the information as soon as it publishes and reduce librarians' efforts of collecting and cataloging. In spite of many advantages, subscribing the foreign digital conference proceedings through consortium has still some issues to discuss.

This study introduces the KESLI consortium first. Then this study describes how to develop foreign digital conference proceedings through KESLI and reviews some issues produced in the subscribing process. Finally this study suggests the solutions of these issues so as to make libraries build the digital grey literature as a major collection.

Bionotes

Suhyeon Yoo is a researcher for the Knowledge Resources Team at Korea Institute of Science and Technology Information. She is responsible for developing overseas electronic information resources including electronic grey resources. She is also in charge of administration for national licenses of KESLI(Korean Electronic Site License Initiative) which is a group buying consortium of overseas electronic resources. Her particular areas of interest are copyright, document delivery, collaborative digital reference service and user interface design. She obtained her master's degree in Library & Information Science from Yonsei University. Email : yoosu@kisti.re.kr

Kijeong Shin is the team leader of Knowledge Resources Team at Korea Institute of Science and Technology Information. He is also responsible for managing the KESLI consortium, developing information resource based on cooperative work as well as enlarging global circulation of domestic scholarly information. As the professional engineer, he led the project of developing web based integrated information service. He has been consulting and evaluating informatization projects of government and public institutes. His particular areas of interest are web services, XML, and U-library. He obtained his master's degree in Computer Science from Hanyang University. Email: kjshin@kisti.re.kr

Heeyoon Choi is the director of Knowledge Information Center at Korea Institute of Science and Technology Information(KISTI), sponsored by the Korean government. Before coming to KISTI, she worked for POSCO Research Institute(POSRI) as the Director of Knowledge Asset Center. She is involved in various other projects such as serving as the Editor-in-Chief of a quarterly academic journal called "Information Management Research", the vice president of Korea Knowledge Innovation Association and the Public Relations Chief of WLIC 2006 Seoul. She is also the vice president of ICSTI(the International Council for Scientific and Technical Information) which is the unique forum for interaction between S&T information organizations all over the world. Her particular areas of interest are knowledge ecology, knowledge management, scholarly communications and collection development. She holds masters and PhD in Library & Information Science from Yonsei University in Korea, and post-master degree from Dominican University in United States. Email: hychoi@kisti.re.kr

Issues of Collecting GL through KESLI

Advantages

- Makes researchers get the information as soon as it publishes
- Reduces librarians' time and effort of identifying, collecting, and cataloging
- Solves the language problem from contract to the service

Disadvantages

- Cannot tailor or customize each library's need
- Cannot negotiate the subscription terms including price
- Cannot archive perpetually
- Has to subscribe every year

FIND THE PIECE THAT FITS YOUR PUZZLE

THE GREY LITERATURE REPORT FROM THE NEW YORK ACADEMY OF MEDICINE

Focused on health services research and selected public health topics, the Report delivers content from over 750 non-commercial publishers on a bi-monthly basis.

Report resources are selected and indexed by information professionals, and are searchable through the Academy Library's online catalog.

Let us help you put it all together; subscribe to the Grey Literature Report today!

Knowledge and Use of Grey Medical Literature by Medical and Paramedical Staff at University/Research Associated Medical Institutions in Developing Countries

Emmanuel U. Onyekwelu, Joan Carlos, Rodriguez David, and Margarita Gonzalez
Royal Victoria Teaching Hospital, The Gambia

The Problem (Background/Introduction) Anecdotal a good body of medical Literature used for systematic review is usually derived from a regression or substantive Metanalysis of well controlled/blinded adequately powered Multicentric studies to generate a level 1 grade A evidence of best practice, presumptively these are in primary sources in the form of publications as original articles in peer reviewed indexed international journals and bibliographies and could be accessed through search engines such as (medline, Pubmed central) Cochrane controlled trials registers, Embase current contents search, Science Citation Index to mention but a few. However recent senior data has shown that a significant body of the medical evidence (up to 60% in some series is in the grey medical literature (ie publications not available through the primary sources outlined above given that Medical research scientists and clinicians are compelled by exigency to produce documents for use in making informed, timely, rational, technical and detailed informative decisions it is imperative for them to device appropriate alternatives for effective communication within specialized research or interest groups, this is the argument for the use of Internal Medical research reports, Technical notes, Medical Institutional bulletins, Memoranda, Non-Indexed refereed Medical Journals ,Chapters in Collective books, final reports of grants received, Proceedings of specialized International Medical conferences, ephemerals, referenced, directed and instructed non-indexed medical journals teaching material, Internet communications, personal communications, other unpublished known to the specialty specific experts, Raw data from unpublished trials and preliminary interim analysis from ongoing trials ,sources operational protocols, guidelines for Laboratory techniques, translations, or information leaflets produced for very practical aims, newsletters, drug patents.

Goal/Objectives/Aim: Traditional, classical teaching is that less body of the medical literature is in the grey literature except in the 5PS(Philosophy, Psychology, Physiotherapy, Pharmaceuticals and of course public health which appears to be reasonably well represented in grey literature in relation to the other medical disciplines. This study is therefore aimed to investigate the knowledge and the use of the grey medical literature among the medical and paramedical staff in university/research affiliated teaching health institutions in developing countries. Existing data intimates that a standardized methodological study of this body of Medical Literature is not replete in developing countries.

Materials and the research method/procedure

A triangulated methodology involving a reactive strategy through multimodal standardize prepiloted questionnaire administration, and non-obtrusive less reactive methodology using Citation analysis of The Grey Medical Literature in the Medical Journals and Bibliographies of developing countries as a surrogate of use of the grey medical resource. Also a methodological study of the accessible medical institutional repositories, open access archives and online thesis and dissertations as proxy estimates of the knowledge and use of the grey medical literature in academic and research biomedical communities.

Bionote

Emmanuel Onyekwelu (M.D, FRSH) is working as a Pediatrician and International Research Fellow in The Department of Paediatrics, Royal Victoria Teaching Hospital, Banjul and The Children's Medical reference Clinic serrekunda the Gambia West Africa. He qualified in Medicine and surgery from The University of Jos, Nigeria He worked for The Nnamdi Azikiwe University Teaching Hospital, Nnewi and the University of Nigeria Teaching Hospital, Enugu, Nigeria. He is certified by the Educational Commission for foreign Medical Graduates (U.S.A) He has made significant meritorious contributions in several areas of medical and childhood investigation, care and development.

His other institutional Affiliations include:

Overseas Fellow of The Royal Society of Medicine London(UK)

Fellow of The Royal Institute of Health and The Royal Institute of Public Health London (UK)

Overseas Foreign Associate of The Royal College of Paediatrics and Child Health, London(UK)

Member of The Society of Paediatric Pathology (U.S.A)

Member of The Society of Paediatric Radiology (U.S.A)

Member of The Society of Social Medicine (U.K)

Member of The European Union of Public Health Associations (EUPHA)

International Member of The European Society of Intensive Care Medicine.

Fellow of the Royal Statistical Society (UK)

Associate Member of Chartered Institute of Library and Information Professionals (UK)

Member of the European Association of Editors.

He has well over fifteen years experience in clinical medicine and investigation. His research interests include Intensive care medicine, Emergency medicine, Oncology, Neurology and Infectious diseases.

He has great interest in use of The Grey Medical Literature for rational, informed evidence based clinical and investigative decision making in Medicine. He is a convener of several t research, clinical and academic interest groups.

Tenth International Conference on The Grey Literature

Science Park Amsterdam, The
Netherlands December 8-9, 2008
Knowledge and the use of The Grey
Medical Literature by The Medical and
Paramedical Staff of University and
Research Associated Medical
Institutions in Developing Countries

Topic Authors Names and Organizations

- Emmanuel.U.Onyekwelu, Joan Carlos
- Rodriguez David, Margarita Gonzalez
- Organizations: Royal Victoria
Teaching Hospital, Independence
Drive, P.O.Box 1515, Banjul, The
Gambia West Africa.
- Telephone: 220/9908295
- Fax: 220/9908295
- E-mail: euonyekwelu@hotmail.com.

Background

- Introduction: Anecdotal a good body of the medical literature used for systematic review is usually derived from a regression or substantive meta-analysis of well controlled adequately powered multicentric studies to generate a level 1 grade A evidence of best practice, presumably these are in the primary sources in the form of publications as original articles in peer reviewed indexed journals and bibliographies and this could be accessed through search engines such as medline, pubmed central, Cochrane controlled trials registers, embase, current contents search, science citation index to mention but as few. However recent senior data has shown that a significant body of the medical evidence up to 60% in some series is in the grey medical literature ie publications not available through the primary sources as outlined above, given that medical research scientists and clinicians are compelled by exigency to produce documents for use in making timely, rational, technical and detailed informed decisions, it is imperative for them to devise appropriate alternatives for effective communication within specialized research or interest groups.

Background Continued.

- Grey medical literature includes internal medical research reports, medical technical reports, medical institutional bulletins, memoranda, non-indexed refereed medical journals, final reports of grants received, proceedings of specialized medical conferences,
- Ephemerals, referenced, instructed and directed non-indexed journals, teaching material, internet communications, personal communications, other unpublished sources known to the specialty specific experts, raw data from unpublished trials and preliminary interim analysis from ongoing trials, sources operational protocols, guidelines from laboratory techniques, translations or information leaflets for very practical aims, newsletters, drug patents, thesis and dissertations.

Goal, Objectives and Aims

- Traditional classical teaching is that less body of medical evidence is in the grey medical literature except in the 5 ps (Philosophy, Psychology, physiotherapy, pharmaceuticals and of course public health which appears to be reasonably well represented in the grey literature in relation to the other medical disciplines. Various medical authors have postulated that peer reviewed indexed medical journals have always been the established much welcomed means of scholarly academic and professional communication for health personnel. The aim and objective of this study is to undertake an empiric investigation of the knowledge and the use of the grey medical literature among the medical and paramedical staff in the university/research affiliated teaching health institutions in developing countries. Existing data intimates that a standard methodologic study of this body of medical literature is not replete in the developing countries.

Methodology and Setting

- A triangulated methodology involving a reactive strategy through multimodal standardized pre-piloted questionnaire administration, non-obtrusive less reactive methodology using citation analysis of the grey medical literature in medical journals and bibliographies of developing countries as a surrogate of use of the grey medical resource and a methodological study of the accessible medical institutional repositories, open access archives and online thesis and dissertations as proxy estimates of the knowledge and the use of the grey medical literature in academic and research biomedical communities.

Results of The Questionnaire surveys and Interim data presentation and analysis

- Of the minimum sample size of 384 using the estimated sample size theorem for proportions for pilot surveys, 176 (45.31%) questionnaires were administered, 154 (87.5%) completed and returned their questionnaires, of these 15 (9.74%) were senior public health physicians,
- 30 (19.48%) were senior clinical nurses, 15 (9.74%) were public health nurses and senior public health officers, 23 (14.94%) were laboratorians/senior laboratory technologists, 5 (3.25%) were medical librarians and archivists, 2 (1.30%) were medical statisticians, 3 (1.95%) were optometrists, 5 (3.25%) were radiographers, 4 (2.60%) were physiotherapists.

Results of The Questionnaire Survey and Interim Data Presentation and analysis

- Analysis of the respondents use of the grey medical literature according to their designated specialties, 11 (73.3%) of the public health physicians and clinical epidemiologists uses the grey medical literature. CI+7.01% (65.99-80.01%) whereas 9 (17.31%) of the other physicians uses the grey medical literature CI+5.93% (11.07-22.93%), 4 (13.3%) of the senior clinical nurses CI+5.31% (7.69-18.31%),
- 4 (17.39%) CI+5.93 (11.07-22.93%) of the medical archivists and librarians, 5 (100%) of the medical statisticians 1 (50%) CI+7.9% (42.11-57.90%) of the optometrists, 1 (33.3%) CI+7.43% (25.57-40.43%), of the radiographers 1 (20%) CI+6.32% (13.68-26.32%) of the physiotherapists 1 (25%) CI+6.84% (18.16-31.84%)

Results of the Questionnaire surveys and Interim data presentation and analysis

- Analysis of the use of the grey medical literature amongst the physicians according to their specialty of interests.
- Internal Medicine, psychiatry and dermatology 2 (11.76%) CI+5.13% (6.87-17.13%), Paediatricians 3 (21.42%) CI+6.43% (14.57-27.43%), Surgical Specialties 1 (9.09%) CI+4.52% (4.48-13.52%), Pathology specialties 2 (18.18%) CI+6.07% (11.93-24.07%)
- Obstetrics and gynaecology 1 (20%) CI+6.32%
- (13.68-26.32%), Public health physicians and clinical epidemiologists 11 (71.33%) CI+7.01% (65.99-80.01%).
- Results of the use of different sources of the grey medical literature: hospital reports 34 (22%), peer peer reviewed non-indexed journals 30 (20.81%), proceedings of specialised medical conferences 20 (12.90%), academic thesis/dissertations 25 (16.10%), other unpublished sources 8 (5.10%)
- Awareness of the nomenclature the grey medical literature 21 (13.63%)
- Knowledge of the grey research network 7 (4.54%)

The Knowledge Transformation in Products and Services: Grey Literature and the Thesis at PPGEP

Gerônimo Vanderlei Machado
Universidade Federal de Santa Catarina (UFSC), Brazil

This thesis focuses knowledge. It discusses the understanding and use of the knowledge. Here we show the contribution of great writers who have dealt with the knowledge, from the point of view philosophic, scientific and methodological. This thesis seconded the specific theoretical, methodological, political economic, environmental, social, and so on in the knowledge uses. Some specifics on the creation and transfer of knowledge explicit and formalized and as it are used in universities. Many things relating to the uses of knowledge are emphasized in this thesis. The main source of research of this thesis is Gray literature - that which is the scientific base for the information and for the technical use of the society. That is, literature, which is produced in universities and, for this thesis, is constituted by those supported PhD Program Post-Graduation Engineering Production and Systems (PPGEP)'s UFSC (Federal University of the State of Santa Catarina) in the period 1995-2007. But only for the digitized Thesis. Thus this thesis Taking Charge of knowledge and focuses on results submitted by the Thesis of this Program and for the branch of Media and Knowledge. The Thesis that have examined in terms of formal and concrete content, because we wanted to verify the extent to which they are processed or can be transformed into the patents and products and services. Or if they are in the works of the Gray literature that serves only to the practices of its sponsors and tutors. One of the results of this thesis is that we did not find any PhD Thesis of PPGEP which will be converted directly into the products or services or patents. But it was able to confirm that many of them extra-Thesis, extra-PPGEP and extra-academic, with certainly, served as a complementation to the formation of its academic sponsors. And, we could not prove if some of them, indirectly, are served as the basis and source for organizing initiatives and type of private companies and for the provision of public use or Para-public, it may be the case of the Group/Institute Stela. Or if they were used and are still being used for its results, as systems of organization and control of education services and utilities for Brazilian Universities, as it seems to be the case resume program - CV-Lattes (CAPES/CNPq). All this suggests that without fireworks, tolerance and functioning extra-legal or Para-legal, the Brazilian Public Universities and programs Post-Graduation, like PPGEP, might have difficulty functioning. There is no doubt that there are products and services of the Public Universities that have originated in the PPGEP and theses that are widely used today in public services and Para-public and diffuses services far all in Brazil. It can be concluded that without such connivance and complicity Brazilian Professors of the Public Universities have major difficulties to work.

Implementation: The Matrix of Consistency of Criteria of Logic

CRITERIA	TESTING SURE LOGIC
THE VALIDITY CONSTRUCTIVE	1. Check were established as the conceptual and operational definitions of key terms and variables in the study so that we know exactly what you want to study - measure or describe. 2. Verify that the test was conducted through the pursuit of multiple sources of evidence for a single variable.
THE INTERNAL VALIDITY	3. Examine whether it was established the causal relationship to explain that certain conditions (causes) lead to other situations (effects). 4. Test the internal coherence between the initial proposals, development and results.
THE EXTERNAL VALIDITY	5. Making the field on which the findings can be generalized. You should test the consistency of the findings of the study and the results of other similar investigations.
CONFIABILITY	6. Verify that the study can be repeated resulting in similar results.

SUMMARY OF THE THESIS - 1

This thesis is cares about human knowledge. It discusses the understanding and use of knowledge that is done. It shows the contribution of intellectuals who have deair with the knowledge, from a philosophical, Scientific and methodological. This theory emphasizes specifics theoretical, methodological, political, economic, environmental, social and so on, about the use of knowledge. Some details about the creation and transfer of explicit knowledge and formalized and how it is used in the Universities. Many things related to the use of knowledge are emphasized in this thesis.

The main source of research of this thesis is that the Gray Literature is the basis of scientific and technical information society. That is, everything that is produced in Universities. This theory is based on the PhD thesis of the Postgraduate Program in Production Engineering and Systems (PPGEP) of UFSC (Federal University of Santa Catarina). It looks, and just be only the arguments that were presented from 1995 to July/2007.

SUMMARY OF THE THESIS - 2

And it only scanned the Thesis and the achievements of BTD-PPGEP. Thus, this argument is based on knowledge and focuses on the results presented by the thesis of this program and it is part of the acquis in the area of Knowledge and Media.

The thesis were examined from a formal and on its specific content, in order to verify the extent to which they have become or can become in patents, products and services. Or are they just part of the gray literature that only served the purpose of their guardians. One of the main results of this thesis was that none have been found them, in PPGEP, which has been converted, directly on patents or products and services.

The research also made unable to confirm, but allowed to assume that many of them, 'non-argument, extra-PPGEP and extra-academic', served to complement the Scientific and academic training of their authors and guardians. But it was not possible to prove which of them, even, indirectly, led and served as the basis for organizing initiatives, private provision of public use, for-public or private... What appears to be the case of Group / Stela Institute.

SUMMARY OF THE THESIS - 3

Or if some were and are still being used by its results, as systems of organization and control of education services and other public or quasi-public Universities in Brazil, as seems the case of the CV-Lattes, CAPES / CNPq, the LED-UFSC and some portals known nationally and so on.

All this suggests that, without artifice, much tolerance and runs extra-legal or para-legal, the Brazilian Public Universities and their programs for the Postgraduate Diploma, as the PPGEP, would be hard to function. Do not doubt the existence of products and services in the Brazilian Public Universities that originated in PPGEP and its thesis and that the results of thesis that are widely used in public services, para-public and diffuse throughout all the Brazil.

One can therefore conclude that without some connivance and complicity of the Teachers Brazilian Public Universities would be hard to work and contribute to our country...

Polish technologies on-line

M. Dominiak, M. Ossowski, K. Siwek, and Krzysztof Lipie, Poland

In February 2008 the Information Processing Centre (OPI) in Warsaw started internet service POLSKIETECHNOLOGIE.pl, devoted to introduction of new technological solutions created by Polish business as well as the scientific institutions. The portal is the accessible source of information directed to researchers and businessmen, who offering or searching technological solutions or the information about possibility of development their own business. The aim of the service is to facilitate communication between scientist and the businessmen as well as inspiring the scientific environments to more commercial utilization of effects of its work.

The creator's main idea was to present in transparent way the branch information which follow the most important Polish science events and information's about advanced technologies. All information on website are introduced by comfortable mechanism, built in support about labour-saving tools.

POLSKIETECHNOLOGIE.PL contain moreover the numerous of thematic sections (the newest relating questions of funding the investigations and intellectual property rights) as well as the information about conferences, trainings or the valid legal adjustments.

In Portal there are published professional branch articles, invitation in events as well as relating Polish science and industry information's. All presented by comfortable mechanism, built in support about labour-saving tools which facilitate using the service (the own explorer, expansion database, calendar of current events, thematic archives).

One of the main parts of service which is addressed to representatives of business is database of the detailed technological offers for business and industry representatives (not only in context of great corporations, but also (and even first of all) the small, trade initiating native technological solutions firms, seeking recipients for their own technologies or the trade partners for own business.

Service is an effect of one year work depending on data acquisition (searching partners and companies interested in implementation of new technologies), technological offers (in present moment about 200), conversations with many experts from Poland and abroad, work on projecting software, and webmasters tools.

The paper presents the working principles of portal as well as the first half-year observation and results of its functioning.

***Scientific information and innovation activities
- OPI experience***

- analysis and statistics concerning Polish science
- scientific and technical information development
- information services and databases on science and technology in Poland
- transfer of the results of research from science to industry and implementation of novel technologies
- science promotion and popularisation

The new initiative of the Information Processing Centre in Warsaw (OPI) is the internet service **POLSKIETECHNOLOGIE.pl** established in year 2008.

The aim of the service is to promote innovative technologies developed by the Polish business and research organizations.

Target groups:

- Small and medium enterprises
- Research and development organizations
- Industry
- Ministry of Science and Higher Education

Virtual Reading Rooms for Efficient Online Search and Access to Grey Literature

Aleksandr V. Starovoitov,
Centre of Information Technologies and Systems of Executive State Authorities, Russia

Aleksandr M. Bastrykin, Yuri M. Bogdanov, and Leonid P. Pavlov,
The Scientific and Technical Information Centre of Russia (VNTIC), Russia

There are several kinds of grey literature that are extremely important as the source of scientific and technical information. Among those are scientific research and development reports and theses. In Russia the latter are presented in the form of candidate and doctoral dissertations and together with scientific reports are centrally collected at the Scientific and Technical Information Centre of Russia (abbreviated in Russian as VNTIC). The VNTIC collection covers all the scientific disciplines and research areas including natural, life, engineering, social sciences and the humanities and is supported in accordance with the Federal Law "On the obligatory copy of documents". The law obliges all the organizations – the collective authors of reports and persons – the individual authors of dissertations to give a free full-text copy of the documents to VNTIC. In turn, the Centre is obliged not only to complete and permanently store the collection but also to disseminate the information on its content.

The dissemination of abstracts and bibliographic information on reports and dissertations in the form of serial abstract journals or online databases is quite correct legally. However, it is evident that an up-to-date information service based on network computing and digital documents representation should meet the requirement of full-text document search and access. It is this requirement that makes it difficult for VNTIC to comply with the Copyright Law and its latest version included in Part IV of the Civil Code of the Russian Federation taken effect on January 1, 2008. Indeed, VNTIC and the like collections holders have to face a legal collision between the law "On the obligatory copy of documents" and the Copyright Law. On the one hand, VNTIC is supposed to provide access to full-text documents as wide and open as possible. On the other hand, full-text digital documents cannot be disseminated without the author's consent. Obviously, it is practically impossible to conclude the agreements with tens of thousands reports and dissertations authors. At the same time to impose a ban on the access to their works would contradict a common sense.

There is a way out of the situation in organizing the so-called virtual reading rooms of VNTIC. The point is that Part IV of the Civil Code permits that the digital full texts of reports and dissertations may be available to readers on the screens of monitors at the centre's reading room with no means of either paper printout or electronic down-load. Besides the reading room at VNTIC premises, it is advantageous to organize the virtual reading rooms in many scientific and/or university cities all over Russia allowing distant users to get access to digital reports and dissertations through the Internet. The visitors of the virtual reading rooms are subjected to the same copyright limitations as the VNTIC reading room visitors: they are supposed to be registered as distant VNTIC readers and are allowed to read the texts being within the precincts of the distant reading room.

The paper focuses on the project in the process of development at VNTIC and aimed at the creation of virtual reading rooms grid covering many higher school institutions and regional information and research centres in Russia. The potential grid audience is estimated at one million scholars. It is evident that the longer the distance of the reading room from Moscow the more its services are demanded.

Grey literature in VET and labour market

Chiara Carlucci, Monia De Angelis, and Silvia Mussolin

L'Istituto per lo sviluppo della formazione professionale dei lavoratori, ISFOL, Italy

In the context of the development of new technologies GL has found new and faster means of diffusion, improving its own visibility and efficiency to the point of being today considered a preferential channel for the diffusion of information, data and communication on specific topics. This is also the case of ISFOL : in fact, as regards vocational education and training (VET) and labour market (LM), the Institute promotes studies and researches, whose outcomes need to be disseminated and delivered towards different targets: from practitioners and policy makers to a wider public not necessarily made of experts. To these ends, ISFOL has established an internal specialised documentation centre (Centro di Documentazione Specializzato - CDS) engaged in the task of creating and managing GL services and documentary products able to functionally support, disseminate and communicate the results of the Institute's activity. The paper aims at providing a presentation of the ISFOL CDS activity, of which the following is a brief extract [...] Over the recently ended period (2000-2006) of the ESF planning, the CDS has been engaged with the core task of coordinating the editorial production of GL, which has been always recognised by our Institute as a key tool for collecting and disseminating the results of its research activities. The methodological approach has been necessarily twofold; on the one hand the CDS had to define editorial policies (and specific GL products) able to strategically face the market rationale; on the other hand, the same structure was responsible to catalogue and index those same products. Many issues have been dealt (though not all solved yet): from the arrangement of specific tools aimed at mapping the research activities (and relative outcomes and publications) of the Institute, to the setting of the most correct relationship with internal researchers whose specific interest in maintaining visibility in bibliographical treatment as "authors" of publications whose scientific responsibility should be of the sole Institute. With all these concerns in mind, the main purpose of CDS has been to create the condition to control the several phases succeeding in the life cycle of the grey literature produced by the Institute. It has been possible this way to make easier the accountability procedures expected within the ESF management, since the same GL products are the results of co-financed actions. In fact, at the end of period considered, the whole production (an overall of 200 titles) has found a proper autonomy in a Hypertextual guide of the grey literature, proposed as a practical tool for improving visibility to the GL produced, most of all providing the most proper thematic/semantic linkages among titles, enabling as much browsing paths as possible. A major purpose of the Guide, that we are pleased to introduce in this session, is to improve public availability of the ISFOL GL production through several utilities: from the full texts provided for each research or contribution to the indexes that allow the catalogue consultation.

Chiara Carlucci graduated and specialized in library sciences, is currently researcher officer of ISFOL Institute for the Development of vocational training for workers (National Public Research organization involved in VET and labour policies). Since 1997 co-responsible for designing and managing research projects on scientific documentation and technical information concerning institutional fields and coordinator of the Specialised documentation Centre of ISFOL. She is an author of scientific and technical issues on specific themes. Email: c.carlucci@isfol.it

Monia De Angelis graduated in library sciences, is currently officer of ISFOL, Institute for the Development of vocational training for workers (National Public Research organization involved in VET and labour policies). She works in the Specialised Documentation Centre and she's involved in research projects on scientific documentation and technical information concerning institutional fields. Since 2006 she collaborates with Refernet project. ReferNet is a structured, decentralised, networked system of information collection and dissemination. It provides high quality information on a wide range of developments in vocational education and training, and learning in the European Union by bringing together the expertise of key organisations. Email: m.deangelis@isfol.it

Once entered the home page, the function "consult" directly allows access to the **Digital Library** (barrier on the left portion of the screen).

This Digital Library is the repository containing all the e-books; their retrieval is possible by different research/browsing channels:

- Series
- Title
- Author
- Keyword
- Type of document

The above mentioned elements compile to structure a descriptive record for each e-book

BIBLIOTECA DIGITALE

GUIDA IVER FESTIVAL
 11.11.2012 - 11.11.2012
 11.11.2012 - 11.11.2012
 11.11.2012 - 11.11.2012

Adult education, Supply, demand and lifelong learning possible.

11.11.2012 - 11.11.2012
 11.11.2012 - 11.11.2012
 11.11.2012 - 11.11.2012

HOW TO SEARCH

Searching by Series, Filter, Authorisation
 allows sequential browsing through alphabetically ordered lists of publications.

Searching by Terms, Type of Research, and Keyword instead, allows for a transversal, semantic-based reading of the e-books:

- the **Series** is related to the System Actions of reference (within which a publication has been funded);
- the **Type of Research** is a categorisation resulting from a formal analysis of the publication (for instance, monitoring report, sample survey,...);
- the **Keywords** corresponds to the descriptors used by ISFOL Specialised Documentation Centre (SDC) for indexing the documentation produced by the Institute.

Furthermore, each e-book has attached a brief description that provides indications to the users for further searching pathways.

GL Compendium a unique current awareness resource in and for Grey Literature

Dominic Farace and Jerry Frantzen, GreyNet, The Netherlands

In the context of the development of new technologies GL has found new and faster means of diffusion, improving its own visibility and efficiency to the point of being today considered a preferential channel for the diffusion of information, data and communication on specific topics. This is also the case of ISFOL : in fact, as regards vocational education and training (VET) and labour market (LM), the Institute promotes studies and researches, whose outcomes need to be disseminated and delivered towards different targets: from practitioners and policy makers to a wider public not necessarily made of experts. To these ends, ISFOL has established an internal specialised documentation centre (Centro di Documentazione Specializzato - CDS) engaged in the task of creating and managing GL services and documentary products able to functionally support, disseminate and communicate the results of the Institute's activity. The paper aims at providing a presentation of the ISFOL CDS activity, of which the following is a brief extract [...] Over the recently ended period (2000-2006) of the ESF planning, the CDS has been engaged with the core task of coordinating the editorial production of GL, which has been always recognised by our Institute as a key tool for collecting and disseminating the results of its research activities. The methodological approach has been necessarily twofold; on the one hand the CDS had to define editorial policies (and specific GL products) able to strategically face the market rationale; on the other hand, the same structure was responsible to catalogue and index those same products. Many issues have been dealt (though not all solved yet): from the arrangement of specific tools aimed at mapping the research activities (and relative outcomes and publications) of the Institute, to the setting of the most correct relationship with internal researchers whose specific interest in maintaining visibility in bibliographical treatment as "authors" of publications whose scientific responsibility should be of the sole Institute. With all these concerns in mind, the main purpose of CDS has been to create the condition to control the several phases succeeding in the life cycle of the grey literature produced by the Institute. It has been possible this way to make easier the accountability procedures expected within the ESF management, since the same GL products are the results of co-financed actions. In fact, at the end of period considered, the whole production (an overall of 200 titles) has found a proper autonomy in a Hypertextual guide of the grey literature, proposed as a practical tool for improving visibility to the GL produced, most of all providing the most proper thematic/semantic linkages among titles, enabling as much browsing paths as possible. A major purpose of the Guide, that we are pleased to introduce in this session, is to improve public availability of the ISFOL GL production through several utilities: from the full texts provided for each research or contribution to the indexes that allow the catalogue consultation.

Dominic J. Farace is Director of TextRelease, an Amsterdam based information bureau specializing in grey literature and networked information. He is a native Louisianan and holds two degrees in sociology from Creighton University (BA) and the University of New Orleans (MA). His doctoral dissertation in social sciences is from the University of Utrecht, The Netherlands, where he has lived and worked for the past twenty-seven years. After six years heading the Department of Documentary Information at the Royal Netherlands Academy of Arts and Sciences (Swidoc/KNAW), he founded GreyNet, Grey Literature Network Service, in 1993 and has since been responsible for the international GL-Conference Series. In this capacity, he serves as Program and Conference Director as well as managing editor of the conference proceedings. Since 2004, he is a Guest Lecturer on Grey Literature in the Masters Program at the University of Amsterdam; Instructor of Grey Literature via UNO Distance Education, and Editor of TGJ, The Grey Journal. Email: dominic.farace@textrelease.com

Jerry Frantzen graduated in 1999 from the College of Amsterdam in Library and Information Science. Frantzen is the technical editor of The Grey Journal (TGJ). And, since 1996, he is affiliated with GreyNet, Grey Literature Network Service, as a freelance technical consultant. Email: info@greynet.org

"Handpicked and Timely Information."

Green Light for Grey Literature? Orphan Works, Web-Archiving and other Digitization Initiatives – Recent Developments in U.S. Copyright Law and Policy

Tomas A. Lipinski, School of Information Studies; University of Wisconsin, United States

This paper reviews recent legislative and case developments in the area of copyright law affecting the preservation including digitization and use of grey literature. Alternative frameworks for crafting a legislative solution are discussed including pending legislation targeting the problem of so-called “orphan works” offering a limitation on the monetary damages or injunctive relief the copyright owner may be granted and another pending proposal aimed at relaxing the anti-circumvention prohibition of section 1201 that would allow access to compilations consisting primarily of public domain works that are protected by technical protection measures. The recent SECTION 108 STUDY GROUP REPORT (March, 2007) also contain recommendations related to preservation of both analog and borne-digital works, including new provision for internet archiving. Finally recent case law supporting the archiving of various sub-literatures from both analog and online sources is reviewed including litigation involving caching and archiving by Google and the turnitin plagiarism combating service. Short of a legislative solution, the procedural elements affecting copyright enforcement are assessed to determine the legal risk in use of grey literature. These proposals and cases are analyzed and critiqued, with assessment towards solving the copyright issues related to the preservation and use of various grey literatures. Policy failures as well as successes in the United States can assist policy makers in other countries when contemplating copyright issues related to preservation and use of grey literature.

Professor **Lipinski** obtained his J.D. from Marquette University Law School, LL.M. from The John Marshall Law School, and Ph.D. from the University of Illinois at Urbana-Champaign. Professor Lipinski has worked in a variety of library and legal settings including the private, public and non-profit sectors. Professor Lipinski teaches researches and speaks frequently on various topics within the areas of information law and policy, especially copyright, free speech and privacy issues in schools and libraries. In fall of 2005, Professor Lipinski was placed on the Fulbright Senior Specialist Roster and was named a member of the Global Law Faculty, University of Leuven in Fall of 2006. Recent articles include: Kathrine A. Henderson , Richard A. Spinello and Tomas A. Lipinski, Prudent Policy? Reassessing the Digital Millennium Copyright Act, *COMPUTERS AND SOCIETY*, November, 2007, at 25 (Volume 37, Issue 2) (25-40); and Hannelore Dekeyser and Tomas A. Lipinski, Digital Archiving and Copyright Law: A Comparative Analysis, *12 INTERNATIONAL JOURNAL OF COMMUNICATIONS LAW & Policy* 180 (2008) (180-224) [available at <http://www.ijclp.net/>].

Green Light for Grey Literature? Orphan Works, Web-Archiving and other Digitization Initiatives— Recent Developments in U.S. Copyright Law and Policy

Prepared for
Tenth International Conference on Grey Literature
Amsterdam, Netherlands
December 8-9, 2008
© Tomas A. Lipinski, 2008

Use Problems: Options

- **What Users Receive: Exemption** (Sections 107 and 108) vs. **Limitation on Liability** (§§§) (Section 504 and Orphan Works proposals).
- **Exemption: THE SECTION 108 STUDY GROUP REPORT** (March, 2007).
- **Limitation on Liability: Solving the Problem of Orphan Works.**
- **DRM (TPM and CMI), section 1201 regulatory exemption process.**
- **Exemption: Fair Use and recent litigation.**
- **Copyright law particulars and Risk Management: a hidden advantage for grey literature initiatives.**

Reform of 17 U.S.C. §108

- **SECTION 108 STUDY GROUP REPORT** (March, 2007), recommendations related to archiving and digitization:
 - Allow outsourcing if no other commercial benefit.
 - Increased access: off-site lending of physical-digital if that was the original format of the item (for preservation/security copying and replacement copying under subsection (b) and (c)).
 - Preservation copying should apply to published works; as many copies as is reasonably necessary, best practices, restrict access, labeled, additional technical and administrative requirements.
 - Internet archiving allowed: “publicly available online content” not protected by password or “requiring an affirmative act by the user to access” but would likely exclude content subject to EULA, initial on-premise access only, remote after passage of time, opt-out for owners, no harm to website, label, limited to private study, scholarship and research.

The Problem of Orphan Works

- “[A] term used to describe the situation where the owner of a copyrighted work cannot be identified and located by someone who wishes to make use of the work in a manner that requires permission of the copyright owner.” **U.S. COPYRIGHT OFFICE, REPORT ON ORPHAN WORKS 15** (2006).
 - “Many users of copyrighted works who have limited resources or are particularly risk-averse have indicated that the risk of liability for copyright infringement, however remote, is enough to prompt them simply to not make use the work. *Such an outcome is not in the public interest, particularly where the copyright owner is not locatable because he no longer exists or otherwise does not care to restrain the use of his work.*” *Id.*

Solving the Problem of Orphan Works

- **Limitation on Liability:** S. 2913, 110th Congress, 2d Session (April 24, 2008) (Shawn Bentley Orphan Works Act of 2008); engrossed in the House September 27.
- **What Users Receive:** Remedy of the owner limited to...
 - Reasonable Compensation (no actual damages, statutory damages, costs, or and attorney's fees).
 - No compensation if: "no purpose of direct or indirect commercial advantage; primarily educational, religious, or charitable in nature; and after notice and opportunity to conduct an expeditious good faith investigation of a notice of a claim of infringement, use promptly ceases.
 - Derivative ("significant amount of original expression") Use: court can not enjoin continued use but can order reasonable compensation and attribution ("statutory license").

Solving the Problem of Orphan Works

- **What Users Must do in Return: Attribution and Search.**

Attribution: "provided attribution, in a manner that is reasonable under the circumstances, to the legal owner of the infringed copyright, if such legal owner was known with a reasonable degree of certainty, based on information obtained in performing the qualifying search."

- **Search:** "performed and documented a qualifying search, in good faith, to locate and identify the owner of the infringed copyright; and was unable to locate and identify an owner of the infringed copyright" and "diligent effort ... reasonable under the circumstances to locate the owner ... prior to, and at a time reasonably proximate to, the infringement."

- a search of the records of the Copyright Office or other reasonably available sources of copyright ownership and ownership, use of appropriate technology, tools including appropriate databases, printed publications, and where reasonable, internal or external expert assistance; Copyright Office "Recommended Practices" and additional appropriate best practices, "may require use of resources for which a charge or subscription is imposed to the extent reasonable under the circumstances."

Technical Protection Measures

- Primary liability separate from copyright:
 - Prohibits circumvention of technological measures that control access, 17 U.S.C. § 1201(a)(1).
 - Prohibits distribution (trafficking) of technologies that control access, 17 U.S.C. § 1201(a)(2).
 - Prohibits distribution (trafficking) of protection technologies that control specific uses of a work, so called "black-box" devices, 17 U.S.C. § 1201(b).
 - "Trafficking" defined: primarily designed to circumvent, or limited commercially significant purpose, or marketed as an anti-circumvention device.
 - "Control" defined: "in-place by owner, no corruption and no distortion of work."
- 17 U.S.C. § 1201(a)(1)(D): 3 year cycle of rule-making, de novo review. Statutory Standard: "noninfringing uses by persons who are users of a copyrighted work are, or are likely to be, adversely affected"

Regulatory/Statutory Adjustment

- The classes of works under current exemption: 37 C.F.R. §201.40 (2006).
 - “Computer programs protected by dongles that prevent access due to malfunction or damage and which are obsolete.”
 - Library preservation of “computer programs and video games distributed in formats that have become obsolete.”
- H.R. 1201, the Freedom and Innovation Revitalizing U.S. Entrepreneurship Act of 2007 (FAIR USE Act of 2007), 110th CONGRESS, 1st Session (February 27, 2007).
 - Compilations consisting primarily of public domain works.
 - Work of “substantial public interest” for purposes of “criticism, comment, news reporting, scholarship, or research.”
 - Harmonization of section 108(c) privileges, but excludes works in “obsolete” formats.

Web Archiving and Fair Use

- *A.V. v. iParadigms, Ltd.*, 2008 WL 728389 (E.D. Va. 2008) (archiving of student papers in the Turnitin database is a fair use).
- *Perfect 10 v. Amazon.com, Inc.*, 487 F.3d 701 (9th Cir. 2007) (vacating injunction regarding Google’s use of thumbnail images) (Thumbnail reproduction is a fair use: “[w]e must weigh Google’s superseding and commercial uses of thumbnail images against Google’s significant transformative use, as well as the extent to which Google’s search engine promotes the purposes of copyright and serves the interests of the public.” *Id.* at 722.)
- *Field v. Google, Inc.*, 412 F.Supp.2d 1106 (D. Nev. 2006) (Google caching is a fair use, bad faith as Field “deliberately ignored the protocols,” implied license defense available).

Web Archiving and Fair Use

- *The McGraw-Hill Cos. Inc. v. Google Inc.*, No. 05 CV 8881 (S.D.N.Y. filed Oct. 19, 2005); and *Authors Guild v. Google Inc.*, No. 05 CV 8136 (S.D.N.Y. filed Sept. 20, 2005). Consolidated under *Authors Guild v. Google Inc.*, No. 05 CV
 - Claims of willful infringement subject to quintuple statutory damages (\$30,000 x 5 = \$150,000 per work infringed).
- MOTION to Approve /Notice of Motion for Preliminary Settlement Approval (October 28, 2008); and STIPULATION AND ORDER FOR AMENDMENT OF PLEADINGS (October 30, 2008) available at

Copyright Law Particulars: Protection?

- **Non-Copyrightable works:** facts, names and titles, scenes à faire, basic forms, etc.
 - *Impact:* some grey literature may not be subject to copyright or DRM rules protection. See, *Online Policy Group v. Redwood, Inc.*, 337 F. Supp. 2d 1195 (N.D. Calif. 2004), and *Leamark International, Inc. v. Statu: ControlComponents, Inc.*, 382 F. 3d 522 (6d Cir. 2004).
- **Fair use:** works of factual nature represent “thin” copyright (second prong: nature of the work).
- **Works designated in the public domain:** 17 U.S.C. § 105 (“Copyright protection under this title is not available for any work of the United States Government.”).
- **Works that have fallen into the public domain:**
 - Failed to comply with technical requirements of registration or renewal, when those requirements mattered.
 - Works for which the copyright has expired.
 - But see, 17 U.S.C. § 104A, restoration of copyright for selected foreign works published works.

Copyright Law Particulars: Publication

- **Publication** is defined in Section 101 as the “distribution of copies or phonorecords of a work to the public by sale or other transfer of ownership, or by rental, lease, or lending”. Examples: 1. The distribution of copies on a busy street is publication. 2. The unrestricted gift of copies constitutes publication. 3. Leaving copies in a public place for anyone to take is publication. 4. Distributing text at a seminar for use only by the recipients is ordinarily not publication. *Compendium II, Copyright Office Practices § 905.02 (1984).*
 - *Estate of Martin Luther King, Jr. v. CBS, Inc.*, 394 F.3d 1121 (11th Cir. 1999) (“I Have a Dream” speech issued by thousands and broadcast to thousands more was not a publication.)
 - *Getipod.com v. Campbell*, 188 F.Supp.2d 308 (S.D.N.Y. 2002) (website revised in June, infringement in July, registration in August. *litigation follows*). “Thus, when a webpage goes live on the Internet, it is distributed and ‘published’ in the same way the music files in *Napster* or the photographs in the various *Playboy* editions were distributed and published.” Id. at 402.
- **Impact:** Internet post can be a publication but must be by the owner, conference proceedings may be a publication.

Other Factors in Risk Assessment

- **The statute of limitations:** three years for civil actions and five years for criminal actions. 17 U.S.C. § 507.
- **Registration and litigation over infringing use of orphan works:**
 - *Permissive*, 17 U.S.C. § 408: “[T]he owner of copyright or of any exclusive right in the work may obtain registration.”
 - *Prerequisite to litigation*, 17 U.S.C. § 411: “[N]o action for infringement shall be brought until registration of the copyright claim has been made.”
- **Damages and publication status:** statutory damages and attorney’s fees available if registration before infringement of an unpublished work and within three months of publication for published works. 17 U.S.C. § 412.
- **Legal Risk:** the potential for liability (“can I be sued”), the likelihood of litigation (“will I be sued”) as well as settlement and the impact of that litigation or settlement (“how much will I owe”).
- **Impact:** Fair use of archive/digitization initiatives and new exemptions/limitations. Reduced legal risk for use of unpublished grey literature.

Legal deposit practices regarding grey audiovisual and multimedia materials carrying Creative Commons licenses and those carrying traditional copyright at the Library of Congress

Debbie L. Rabina, Pratt Institute; School of Information and Library Science, United States

Purpose: The purpose of this study is to determine whether the type of copyright license under which grey multimedia materials are published, makes a difference in terms of their inclusion in library catalogs. The two types of copyright licenses examined are Creative Commons and traditional copyright, and the library catalog examined is that of the United States Library on Congress.

Background, justification, and hypothesis: In the United States, copyright is granted automatically to all creative works. Registration with the U.S. Copyright Office is not a requirement for copyright protection. Legal Deposit is required by the Library of Congress for all works under copyright protection. Although not specifically exempt from legal deposit requirements (see Part 202 of 37 CFR, Chapter II for list of exempt materials) logic follows that works created under Creative Commons do not fall under the scope of Legal Deposit requirements.

One of the advantages to publishers from legal deposit is the inclusion of deposited materials in the Library on Congress catalog and the assignment of a deposit number subfield in the items MARC record (field 017 of MARC 21 record format). Creators of multimedia content, who chose a Creative Commons license, are therefore at a disadvantage compared to traditional copyright holders, in terms of making the record of their work available to a wide audience.

This research wishes to examine the representation of grey multimedia materials that carry Creative Commons licenses compared to those who carry traditional copyright.

Methodology: The population for this study will include two groups that share some commonalities and some differences. Both groups will include grey multimedia materials whose main use is as educational materials. The research population will be grey multimedia materials published specifically under Creative Commons licenses, and the second group will include grey multimedia materials published under traditional copyright.

This study adopts list-checking as the primary quantitative methodology, comparing representation of both groups in the Library of Congress's open public access catalog (OPAC). The list is not intended in any way to be comprehensive, but rather representative of grey multimedia content used primarily in educational setting.

Legal deposit practices regarding grey audiovisual and multimedia materials carrying Creative Commons licenses and those carrying traditional copyright at the Library of Congress

Results of a phase I pilot study

Debbie Rabina, Pratt Institute-SILS
GL 10, Amsterdam, Dec. 9, 2008

Problem statement

- First, some established truths:
 - Grey materials provide challenges to access due to lack of bibliographic control
 - Large OPAOs, in particular national bibliographies or national union catalogs, are the most comprehensive means of bibliographic control available
 - National bibliographies increase holdings thanks to legal deposit materials
- Next, some problems inherent into the system:
 - The more up-to-date legal deposit laws include multimedia and/or non-print materials, but some address only the deposit of print materials
 - Although not required for copyright protection (WIPO provision), legal deposit applies to materials holding traditional copyright and does not address copyright alternative such as Creative Commons licenses
- Our question: What happens when Creative Commons meets the National Catalog? Are grey multimedia materials licenses under creative commons less likely to be included in national catalogs than grey-multimedia-traditional? Are grey-multimedia-creative commons materials at a disadvantage?
- Hypothesis: If educational multimedia are more likely to appear in national bibliographies and union catalogs than CC licensed items

Who does this matter to?

Justification

- Everyone, producers and consumers of multimedia, because multimedia is everywhere
- The use of multimedia extends traditional use of art both in scope and in audience. Multimedia is as much a part of learning and teaching as text is and learners are shortchanged but the lack of multimedia as part of their educational experience
- A typical day in the life of a U.S. college professor, includes use of multimedia for learning, teaching, and entertainment
- Are there barriers to access to multimedia that are associated with the type of copyright license the multimedia holds?

Welcome to the age of

copyright confusion

- Lawsuits filed against educational institutions for copyright violations has created a culture of fear among educators and librarians. Many items that are in the public domain get slapped with copyright notices.
- Some creators chose to work outside the traditional copyright paradigm by using Creative Commons licenses which allow use of their work without royalties, and usually with some restrictions, namely attribution, non-commercial, no derivatives and share alike.
- Users of content need to know a lot: when they can use a work, and under what conditions, that can apply to a growing number of copyright models: traditional, creative commons, copyleft and GNU.

Copyright licenses

types and implications

- CONFU – Conference on Fair Use established **guidelines** for the use of multimedia materials for educational purposes.
- Copyright is a personal property right that protects creators and allows them to benefit from their intellectual and creative work
- Traditional copyright © equates benefit with profit and secures benefit to the copyright holder, primarily authors and/or publishers
- Creative Commons licenses usually associate benefit with recognition and credit which are spread on a voluntary bases rather than by enforcement of law.
- Traditional copyright is frequently viewed as a harb

Legal deposit for multimedia

- USA: The U.S. code addresses sound recordings specifically but multimedia implied, not specifically mentioned
- Australia: The copyright Act of 1968 does not specifically mention multimedia, but amendments under the 2004 *Publications Legal Deposit Act* for the Northern Territory, includes "material subsequently derived from information so recorded or stored (for example – audio cassettes, video cassettes, films, multimedia kits, computer magnetic tape, computer optical discs, floppy discs, compact discs, CDROMs, DVDs, websites and PDF files)"
- Belgium: Legal Deposit law applies only to book materials (2005)
- Israel: As of the revised 2001 legislation, legal deposit applies to all non-print materials

Methodology

- Quantitative study using list checking for both the study and the control group
- List was developed by polling faculty at graduate level library and information science schools and librarians supporting such programs, and included materials used for teaching and materials suggested by graduate students who use them as part of course work.
- The list contained about 200 items and was cut down to 117 that met the following conditions: Their origin was traceable, their copyright license type not ambiguous, and they originated from one of four countries that emerged as the four top originators of content: the United States, Australia, Belgium and Israel
- The sample contained primarily film and some music
- Prior to data collection, one focus group session was held to identify the ways in which faculty use multimedia materials
- The OC2C 017 field, that identifies legal deposit materials, was used whenever available

The sample

- Sample consists of 117 items, half holding traditional copyright and half holding Creative Commons copyright.
- Items represented are educational multimedia, by definition or by practice, with a core group used in social science higher education, and related materials
- Year span: 2001-2008 (range 9.628% to 25%)
- Countries represented: USA (75%), Australia (8.4%), Belgium (8.3%), Israel (8.3%)
- Types of media presented: movie (download and/or DVD) (83.3%), video game (8.4%), music (8.3%)
- Length range: 17:37 min to 2:43:03 min

Results: overall

- Overall, 8.3% of items were found in LoC
- Overall, 41.6% of items were found in WorldCat
- Overall, 41.6% of items were found in IRIS
- Overall, 33 % of movies (n=81) were found on Netflix, 40 % were found complete on YouTube, and an additional 30% were found on YouTube as trailers
- Number of libraries holding item as per WorldCat: range 20-1619 libraries (items in WorldCat: n= 45)

Results: by license

- | | |
|--|---|
| <ul style="list-style-type: none"> • Traditional copyright <ul style="list-style-type: none"> – 57% of  multimedia (n=63) were available on LoC or WorldCat – 20% of  movies (n=49) were available complete on YouTube | <ul style="list-style-type: none"> • Creative Commons <ul style="list-style-type: none"> – 16% of CC multimedia (n=54) were available on LoC or WorldCat – 50% of CC movies (n=58) were available complete on YouTube |
|--|---|

Results: in national catalogs

- | | |
|---|--|
| <ul style="list-style-type: none"> • Traditional copyright • In LoC catalog: 8.3% • Other national catalog: (Australia, Belgium, Israel): 0% | <ul style="list-style-type: none"> • Creative commons • In LoC catalog: 0% • Other national catalog: (Australia, Belgium, Israel): 0% |
|---|--|

Finding & Conclusions

- | | |
|--|---|
| <ul style="list-style-type: none"> • Our hypothesis, that  educational multimedia is more likely to appear in national bibliographies and union catalogs than CC licensed items was proven TRUE, but overall the % of items in national bibliographies and catalogs was SMALL. • Highest number of items were found in WorldCat and IRIS. • YouTube offered 70% items in complete or abridged form. | <ul style="list-style-type: none"> • All multimedia is overlooked by national catalogs, regardless of copyright license type. • Commercial union catalog (WorldCat) better represent grey multimedia than national bibliographies (Library of Congress). • Creative Commons is a barrier to access in traditional tools. • Traditional copyright is a barrier to access in web 2.0 environments. |
|--|---|

Implications: Application and enforcement of legal deposit to nonprint materials is weak, regardless of license type, implying disappearance of many of these materials.

The "Grey" Intersection of Open Source information and Intelligence

June Crowe and Thomas S. Davidson,
Open Source Research Group; IIA, Inc., United States

The term "open source information" refers to information that is unclassified and also signifies information that is derived from overt, non-clandestine or non-secret, as opposed to hidden or covert collection. Open source information as defined by the Intelligence Community refers to information that is publicly available to anyone and is obtainable lawfully by request, purchase, or observation (1). However, some open source information that is collected, including information provided by outside experts, can be classified. This action is to prevent sources, methods, policies, or other information from being revealed (2). Reports produced by government contractors may fall into this "grey" intersection of open source and intelligence. This grey area may prevent reports from being readily accessible to the public, because the open source research provided analysis based upon classified requirements. If the report is strictly a collection of open source material then it is not generally classified but may be available only on a need to know basis.

At what point does open source information become "open source intelligence?" The answer provided by the statutory definition is vague in its statement that such information becomes "intelligence" when it is collected, exploited, and disseminated in a timely manner to an appropriate audience for the purpose of addressing a specific intelligence requirement." In intelligence circles the definition is referred to as "collection" whereas, open source analysts prefer to use the term "acquire," because analysts generally acquire previously collected and publicly available information second-hand

This paper will discuss the dilemma of this grey intersection of open source and intelligence. It will review US open source policy and an emerging new paradigm of outsourcing and relationships in the intelligence community. The new paradigm has been brought about primarily by advances in information technology that allow for customized systems, easy networking for sharing and exchanging data, and decentralization of systems. This new paradigm would move away from small secret government bureaucracies to a more virtual community. It would also lessen the reliance on "classified information," moving instead toward an all-source product.

Results/Conclusions:

As the intelligence community bridges the gap between open source and intelligence, the lines between what is "collection" and open source is becoming increasingly grey. In order to utilize open source to its best advantages, significant changes in the ability to communicate more directly with open source researchers will need to occur.

June Crowe is the Senior Researcher at Information International Associates, Inc. (IIA). She received her AMLS from the University of Michigan, Ann Arbor and her M.Ed. in geographic education from the University of Georgia, Athens. She has extensive experience in the management and operations of library services across government, public, academic, and special libraries. At IIA she performs open source research on a variety of topics and manages research projects involving web-based open source document identification, collection, and processing. Her primary interests are open source information in Grey Literature, repositories, and open source intelligence tools. Email: jcrowe@iiaweb.com

Thomas S. Davidson II was a Senior Military Intelligence Analyst at the Foreign Military Studies Office (FMSO) of the U.S. Army Training and Doctrine Command at Ft. Leavenworth, Kansas. He founded and led the FMSO Mexico and Southwest Border Security Team for exploitation of primary language Latin American open source material for items of interest to U.S. National and Border Security. His training includes coursework at the Defense Language Institute, Monterey, California, for Vietnamese, German,

Korean, and Czech languages, as well as other military development courses, to include the Warrant Officer Advanced course in 1993. CWO4 Davidson received his BA degree from the State University of New York in Albany, New York. He co-authored the U.S. Army Interpreter/Translator course for the Military Occupation Specialty (MOS) 97L. CWO4 Davidson joined the U.S. Army as an infantry soldier in 1969 and began his Military Intelligence career in 1971 when he attended the Prisoner of War Interrogator course at Ft. Hood, Texas. His military intelligence duty assignments cover more than 36 years of active and reserve duty in a wide range of positions in Southeast Asia, Europe, and Central America, ranging from Senior Interrogator to Senior Analyst to Senior Liaison Officer to Commander. CWO4 Davidson owned and operated a language institute, Languages of El Paso, which provided language services in five primary languages to the "maquiladora" industry in Cd. Juárez, Cd. Chihuahua, and Nogales, Sonora. In 1997 he supported Bechtel Corporation on its PEMEX contract as a human resource manager and liaison to Mexican border and customs agencies. CWO4 Davidson's awards include the Legion of Merit, the Meritorious Service Medal, the Joint Service Commendation Medal, two Army Commendation Medals, the Army Achievement Medal, and the German Army Marksmanship Award.

Outsourced
by R.J. Hillhouse

"Any revelation of classified national security information is purely coincidental and is the product of a rigorous analysis of open source materials coupled with a vivid imagination."

This author recognizes the unappreciated value of Open Source Information.

When does Open Source Information become Grey and Classified?

- Derived from overt, non-clandestine sources
 - Publicly available
 - Lawfully obtained by anyone
- Collection and processing
- Information to Intelligence

U.S. Government Actions in Support of Open Source

- National Open Source Committee
- DNI Conferences
- Open Source Centers
- New Technologies/Social Networking Tools
- Impact on Intelligence Community Operations

Open Source Reliability Issues

- Open Source must be evaluated for the following:
 - Competence
 - Veracity
 - Objectivity
 - Observational Sensitivity

Source Reliability

CODE	RATING	DESCRIPTION
A	Reliable	No doubt of authenticity, trustworthiness, or competency; has a history of consistent reliability; usually demonstrates adherence to known professional standards and certification processes.
B	Usually Reliable	Minor doubt concerning authenticity, trustworthiness, or competency; has a history of valid information most of the time, may not have a history of adherence to professionally accepted standards but generally identifies what is known about sources looking any broader.
C	Fairly Reliable	Doubt of authenticity, trustworthiness, or competency but has provided valid information in the past.
D	Not Usually Reliable	Significant doubt about authenticity, trustworthiness, or competency but has provided valid information in the past.
E	Correlative	Lacking in authenticity, trustworthiness, and competency; history of lies and distortion.
F	Cannot Be Judged	No basis exists for assessing the reliability of the source; new information source.

Information Credibility

CURE	RATING	DESCRIPTION
1	Confirmed	Confirmed by other independent sources; logical in itself; consistent with other information on the subject.
2	Probably True	Not confirmed; logical in itself; consistent with other information on the subject.
3	Possibly True	Not confirmed; reasonably logical in itself; agrees with some other information on the subject.
4	Indubitably True	Not confirmed; possible but not logical; no other information on the subject.
5	Impossible	Not confirmed; not logical in itself; contradicted by other information on the subject.
6	Misinformation	Unintentionally false; not logical in itself; contradicted by other information on the subject; contradiction confirmed by other independent sources.
7	Deception	Deliberately false; contradicted by other information on the subject; contradiction confirmed by other independent sources.
8	Cannot be Judged	No basis exists for evaluating the validity of the information.

International Association of Teachers of English as a Second Language

What to Evaluate

- Source
 - Author
 - Date of Publication
 - Publisher
- Content
 - Intended Audience
 - Information
 - Other Holdings
- First Example
 - Considered to be an Extremely Unreliable Source

International Association of Teachers of English as a Second Language

SEN. JOHN EDWARDS CAUGHT WITH MISTRESS AND LOVE CHILD

"Vice Presidential candidate Senator John Edwards was caught with his mistress and secret love child at 2 a.m. this morning in a Los Angeles hotel by the National Enquirer."

The married ex Senator from North Carolina - rumored to be a father of a child - met with his mistress, Jessica Hahn, at the Beverly Hills on Monday night, July 21 - and the NATIONAL ENQUIRER says they stayed in a hotel until early the next morning.

Edwards flew to Los Angeles from Santa Barbara with a maid hired for the mistress with Edwards. The former senator attended a press event Monday afternoon with U.S. Mayor Antonio Villaraigosa on the topic of how to combat homosexuality.

Even these "muck raking" journals occasionally publish an article that can be rated as "1" on the Information Credibility scale. However, the source and the article quoted above would be rated as D-2:

- D = "not usually reliable source"
- 2 = "probably true," but the article erroneously refers to Edwards as a vice-presidential candidate and instead of a presidential candidate.

International Association of Teachers of English as a Second Language

Second Example

- Ideologically motivated website
- Map of all Mexican units by location and unit designation
- Track drug and illegal immigrant trafficking
- Of interest to DHS and USBP

Grey Intersection of Open Source Information and Intelligence

- Classification and Security Markings
 - Controlled Unclassified Information (CUI)
 - Sensitive but unclassified (SBU)
 - Classification or
 - Protective caveat
 - » Controlled with standard dissemination
 - » Controlled with specified dissemination
 - » Controlled enhanced with specified dissemination

Future of Open Source and Intelligence

The Director of National Intelligence, Mike McConnell, examined the future of Open Source Information/Intelligence in the most succinct manner:

"The global, transitory nature of our targets, and the increasing demand for information and the capacity of our means to collect it, require multiple, integrated collection systems. Each of the collection disciplines — human intelligence, signals intelligence, computer network exploitation, geospatial intelligence, measurements and signatures intelligence, open source intelligence, scientific intelligence, and foreign internal penetration — will continue to play key roles, although their relative importance will almost certainly change over time."

"No aspect of collection requires greater consideration, or holds more promise, than open source information; transformation of our approach to open sources is critical to the future success of Adaptive Collection."

Open Source Intelligence will never replace the other "INTs," but it can and will act as the seed and as a guidepost to indicate where the other INTs should be used.

Grey Literature for Natural Language Processing: A Terminological and Statistical Approach

Laura Cignoni, Gabriella Pardelli, and Manuela Sassi,
Istituto di Linguistica Computazionale, CNR, Italy

Since the advent in the 90's of the WWW technologies, computing has had a strong impact on modern society offering new opportunities of expansion for future research. Storage, acquisition and transmission of information have gradually replaced previous paper-based documentation. The third Web generation is characterized by intelligent search and filtering systems which use semantic metadata and ontologies to retrieve term-concept relations and provide significant meaning to the information stored in the web. To what extent is it possible to prevent the disappearance of the memory of documents that are described by terms undergoing a very rapid evolution as is the case of the field of Natural Language Processing (NLP)? We are using a statistical representation of the most significant terms to create a grid of associations between old and new words belonging to the field of NLP. Our work is based on the automatic processing of a sample of Grey Literature (GL), in English, French and Italian, collected in an appropriate database containing ca 10,000 titles of papers resulting from previous experiences. Particular attention is given to those disciplines which most influence certain terminological changes, contributing to the creation of linguistic resources for the extraction of GL coming from the Web. This paper is divided into three parts: 1) the first part includes: i) titles of papers presented at the conferences of the Association for Computational Linguistics (ACL) (in particular the ACL Anthology) and of the Association for Language Resources and Evaluation (ELRA); 2) The second part analyzes the terms used by specialists in the field of research. For example the study shows that terms like *meccanizzazione* (It.), *mechanical translation* (Engl.), *machine à traduire* (Fr.), used in the 50's and 60's, seem to mark the changes, transition, start-up and consolidation of this sector which has developed thanks to the use of computers in research and linguistic studies. Computational Linguistics (CL) originally used adjectives such as *electronic*, *automatic*, *mechanical* and *cybernetic*, which were specific loan words from associated disciplines that have developed for the different application environments, and which can be referred to the same epistemology. In this way the role of terminology for GL retrieval in a multilingual society is increasingly dependent on knowledge and information. 3) The final part presents the statistical sample of Natural Language Processing terminology using a diachronic interpretation of the data.

Bionotes

Laura Cignoni, a former British School teacher, has been working at the Institute for Computational Linguistics in Pisa of the National Research Council since 1981. Her interests and activity range from studies in comparative lexicology and lexicography, with particular regard to multiword expressions in English and Italian, to philology and its related disciplines, to the creation of computer tools for children's dictionaries. She has participated in many national and international projects including the recent ongoing Medici Project in Florence. She has edited numerous publications, in particular the journal "Linguistica Computazionale", publication of the Institute for Computational Linguistics.
E-mail: laura.cignoni@ilc.cnr.it

Gabriella Pardelli graduated in Letters at the University of Pisa in 1980 and has been working at the Institute for Computational Linguistics of the National Research Council in Pisa since 1984. She has been active in the creation of bibliographical databases for Natural Language Processing (NLP) and Digital Library in the Humanities. Other interests regard terminology and History of Human Language Technology. She is responsible for the Library of the Institute of Computational Linguistics and the collection called "Antonio Zampolli Fund". She has participated in many research projects and has worked on the creation of bibliographical resources in the field of language technologies. She has presented many works at different national and international conferences and congresses.
Email: gabriella.pardelli@ilc.cnr.it

Manuela Sassi. Graduated in Foreign Languages and Literature at Pisa University, 110/110 cum laude. Since 1974 she has been working in Pisa at the Institute for Computational Linguistics of the National Research Council. Her interests and experiences range from linguistic to textual data processing and in providing linguistic resources on-line. She has been responsible for many national projects and has participated in numerous international projects. E-mail: manuela.sassi@ilc.cnr.it

Statistical representation

The most significant old and new terms relative to grey literature in the field of natural language processing and other interrelated disciplines have been associated, highlighting the terminological changes that have taken place in the course of time

ROLE OF TERMINOLOGY

As the queries are often incorrect, inappropriate, or simply far too general, it is necessary to integrate pre-existing or obsolete words and expressions used by specialists in the different domains to create a synonym relationship between the terms contained in the different NLP documents. In this way a term, even if dated and no longer in use, can become the key to enter the world of knowledge

GREY LITERATURE CORPUS

Our grey literature corpus is composed of ca 13,000 records corresponding to the titles of papers presented at International Conferences in the field of natural language processing (1950 to June 2008)

SOURCES

The main sources for our Corpus include:

- ACL Anthology
- IREC Conferences
- Weaver Memorial
- Alpac Report
- Conferences on Automatic Translation

Methodology

The methodology used is the following:

- Search and saving of the most common single terms which are the object of this study
- Extraction of the contexts with year and abbreviation of the conference
- Generation of tables according to the chronological use of these terms
- Creation of charts

Words extracted from GL Corpus

Do High-Energy Physics Scholars read Scientific Journals?

Anne Gentil-Beccot
European Organization for Nuclear Research, CERN, Switzerland

It has been long established that grey literature is a crucial communication vehicle for High-Energy Physics scholars. This leads to an obvious question: if grey literature is so important, do High Energy Physicists still read scientific journals as such?

The paper will present a study done at CERN in 2008 on a sample of the High Energy Physics community.

This study analyses a compilation of data from several sources, among which usage logs and citation analysis, to understand how scholars from the High-Energy Physics community actually "read" the information they need.

These data are cross-analyzed with the fraction of journal content which is available through grey literature and we find that journal usage is anti-correlated with this fraction.

We conclude that High-Energy Physics scholars mostly access information through grey literature, even though they continue to see journals crucial in their research for functions other than dissemination of scientific information.

Bionote

Anne Gentil-Beccot studied French literature before obtaining a master degree in Information Science. She is now serials librarian in the CERN Scientific Information Service and contributes to the CERN Open Access actions. Email: Anne.Gentil-Beccot@cern.ch

Nancy STYLE

a tool to improve the production of Grey Literature

What is Nancy Style?

It is the informal name given to the

Guidelines for the production of scientific and technical reports: How to write and distribute Grey Literature

formally presented by the Istituto Superiore di Sanità (Rome, Italy) during the 7th International Conference on Grey Literature held in Nancy (France) in December 2005.

Who can use this tool?

Authors and GL producers
in their mutual task of creating and distributing
accurate, clear, easily accessible reports in different fields.

Which goal?

Permit an independent and correct
production of institutional reports
in the respect of the basic editorial principles.

Which language?

The original version is in English. Its translations are in:

- Italian (by Istituto Superiore di Sanità)
- French (by Institut de l'Information Scientifique et Technique)
- German (by Technische Informationsbibliothek/Universitätsbibliothek)
- Spanish (by Universidad de Salamanca, *in preparation*)

Where can you get it?

All the versions are available
from the official site of the GLISC:
www.glisc.info.

What is GLISC?

The group approving these Guidelines is formally
defined as Grey Literature International Steering Committee,
composed of:

Istituto Superiore di Sanità
(ISS), Italy

Institut de l'Information Scientifique et Technique
(INIST-CNRS), France

Grey Literature Network Service
(GreyNet), The Netherlands

What is it about?

- Ethical principles related to the process of evaluating, improving, and making available reports, and the relationships between GL producers and authors.
- Technical aspects of preparing and submitting reports.

For information:
www.glisc.info
secretariat@glisc.info

Grey Literature produced and made available by Universities – Helping future Scholars or Copycats?

Primož Južnic
University of Ljubljana, Slovenia

Universities and other institutions of higher education are far mostly the greater producers of Grey literature. Most of their education process is based on different written essays or other sort of similar tasks. Even more important, the whole process is usually finished by some sort of written dissertation (graduation work, diploma) that shows that a graduate is capable of research work and has a proper knowledge of the field.

Traditional paradigm was to make this material available through academic libraries. WWW has helped to solve it and relieve academic librarians from trivial and routine tasks. It has also made it easier for all potential users, usually students themselves, to reach these materials, adding to other materials students can use and are part of GL materials. This sounds as a great keep forward if current research would not indicate that academic plagiarism is now a very serious problem worldwide.

The result of the research presented in this paper, presents how librarians are getting involved in both, making materials available and in the same time battle against plagiarism, their expertise in dealing with different information sources, including the ones labeled as Grey literature, can be used to help teaching staff in their strife for the quality academic education. These are also one of the turns forming the traditional library tasks and services, toward more professional expertise expected by the information experts. The paper will present also the research among academic libraries in Slovenia, wishing to present how presently this literature is made available and what extra services is offered by academic librarians.

There are many good technical methods of detecting plagiarism, but it cannot be expected to leave to them to fight alone in the prevention battle. Librarians can help a lot by educating students about how their work will be assessed and the potential traps of potential plagiarism. On the other side students' written work can be important information resources not only to them but also to wider professional public and should be making available as widely and openly as possible.

Bionote

Primož Južnič is an associate professor at the Department of Library and Information Science and Book Studies at Faculty of Arts, University of Ljubljana (Slovenia). His main area of research and interest is bibliometrics, collection management and LIS education. He teaches the following courses: Bibliometrics, Special libraries, and Collection Management. Before starting his university career, he was a heading different special and academic libraries and information/computer centres. He was also working at the European Commission, for three years, as the seconded informatics expert.

Pre-Bologna system

Institutions of Higher education
March 2008)

Four Universities with 53 Schools (Faculties)
and numerous departments.
12 other institutions of higher education.

There are three university libraries and almost every School (Faculty) has its own library and often. Some new higher institutions and new Schools have no library.

Methodology

- All academic institutions have been surveyed.
- 63 libraries chosen for further survey.
- 11 librarians interviewed.
- Fall 2008

Results 1

- All libraries use National Union Catalogue.
- Only a few have their own digital library – repository with thesis and dissertations (no coordination).
- Many libraries allow the use of thesis and dissertations in the library premises.
- Some of them request authors' permission.

© 2005 by the author

© 2005 by the author

10

Results 2

- All librarians regard thesis and dissertations as an important part of their library collections.
- Plagiatirism is importnat only for some of the libraries.
- Only few librarians are directly involved in helping students with their thesis and dissertations.

© 2005 by the author

Challenges for the future

Building national digital library with electronic theses and dissertations.

National Union Catalogue, COBISS, is a good starting point.

Decentralization of academic libraries is the greatest obstacle.

Library service should be organised for all higher education institutions.

© 2005 by the author

© 2005 by the author

12

Electronic submission

Next step should be electronic submission of thesis and automatically building of repositories.

Plagiarism will be less likely when all thesis will be equally accessible in digital form.

11

Future tasks

for electronic thesis program

- o finding technical solutions and
- o practical procedures
- o without placing any additional burden on students, professors or librarians.

INTEREST (INTERoperation for Exploitation, Science and Technology)

Keith G. Jeffery, STFC; Council Rutherford Appleton Laboratory, United Kingdom

Anne Asserson, University of Bergen, Research Department, Norway

This paper addresses the topic of interoperation of Grey resources. The title should be read as INTERoperation for Exploitation, Science and Technology. It builds on work by the authors published in previous GL conferences. The method is architectural analysis and comparison. The costs of the study are negligible, but of course the costs of implementing any solution are considerable. The result/conclusion is that CERIF (Common European Research Information Format) is the essential component to meet the requirements and is applicable – to a greater or lesser degree – in all architectural solutions.

Our GL9 (2007) paper proposed a Grey landscape architecture and identified the need for (1) excellent metadata (to improve discovery and control usage), (2) an institutional document repository of (or including) grey, (3) an institutional CRIS for the contextual research information, (4) linkage between the document repository and the CRIS of an institution and thence (in a controlled manner with formal descriptive and restrictive metadata) to other institutions, (5) an e-research repository of research datasets and software, (6) linkage between the e-research repository and the CRIS of an institution and thence (in a controlled manner with formal descriptive and restrictive metadata) to other institutions, (7) an institutional policy to mandate deposition of the material with appropriate metadata.

These very requirements define the components for interoperation of Grey resources, and their interoperation with other resources to provide a holistic support for R&D. Indeed they can be extended (via the CRIS) to interoperation with other management systems of an organisation such as finance, human resources, project management, production control etc.

However, the capability for interoperation can be provided in several implemented architectures. This paper discusses the advantages and disadvantages of different solutions including experience of their use. This analysis and experience is then applied to the grey environment. Remote and local wrapping of resources, cataloguing techniques and a full compliant model are discussed as well as harvesting technology. It concludes that – particularly for the grey environment – the optimal architecture involves formal syntax (structure of information) and defined semantics (meaning of information) as defined by CERIF.

Bionotes

Keith Jeffery is currently Director, IT and International Strategy of STFC (Science and Technology Facilities Council), based at Rutherford Appleton Laboratory in UK. Previously he was Head of Business and Information Technology Department with a staff of 140 supporting over 360000 users, developing software for business and science and doing leading edge R&D. STFC hosts the UK and Ireland Office of W3C and develops and supports the largest OA institutional repository in UK. Keith is a Fellow of both the Geological Society of London and the British Computer Society. He is a Chartered Engineer and Chartered IT Professional. He is an Honorary Fellow of the Irish Computer Society. He is president of euroCRIS (www.eurocris.org) and of ERCIM (www.ercim.org) and holds three honorary professorships. He has extensive publications and has served on numerous programme committees and research grant review panels. He has particular interests in 'the research process' and the relationship of hypotheses, experiments, primary data and publications based on research in information systems, knowledge-based systems and metadata. Email: k.g.jeffery@rl.ac.uk

Anne Asserson holds a Cand. polit. with a Masters in Information Science from the University of Bergen, UiB. She has been working with Research Documentation, and has participated in substantial parts of CRIS developmental work, locally and nationally. Asserson has been part of the establishing and implementing of a Research Documentation system, Fdok www.ub.uib.no/fdok/sok/, at the UiB. For several years she was the chairwoman of the Steering Group of the national CRIS system and project secretary of a National system for academic administration. Asserson is presently representing UiB in the national group that is implementing a new national research documentation system, FRIDA. She has also participated in The CORDIS funded European-wide project on "Best Practice" 1996. She was a member of the working group set up 1997 that produced the report CERIF2000 Guidelines (1999) www.cordis.lu/cerif, coordinated by the DGXIII-D4. euroCRIS is now the custodian of the CERIF model www.eurocris.org. She is a member of the Best Practice Task Group. Email: anne.asserson@fa.uib.no

Background

- Grey literature repositories can be linked without CRIS using OAI-PMH and DC
- Grey Literature Repositories provide better recall and relevance when interlinked via CRIS
 - Formal syntax, declared semantics
- Metadata
 - Schema
 - Navigational
 - Associative (descriptive, restrictive, supportive)

Figure 1: CRIS + Repositories at 1 institution

CRIS + Repositories at 1 institution

...and multiple institutions

- simple query on union catalog (which may be centralised or replicated)
- possibly not all required entities and attributes in catalog
- effort to populate catalog; requires converter at each host to supply CERIF metadata

11

- advantage of simplicity as for catalog-only architecture
- advantage of additional information provision
- disadvantage that additional information is heterogeneous (unless converted to CERIF export data model)
- disadvantage of hosts having to maintain entries representing their database content in the CERIF metadata catalog

E. J. M. Janssen, J. van den Broek

15

- The host free to provide a copy of the database as webpages to be available to the search robot and subsequent accesses based on clicks from URL of metadata
- The query is based on existence of term(s); constraining by entity or attribute is not possible (without sophisticated xml form processing)
- The results are unstructured and one page at a time (click on URL in metadata catalog to see page); this inhibits statistical processing or report generation.
- It is easy to implement and maintain (although the database may be ~2 weeks out of date) and has a familiar interface for many WWW users.

- [illegible]

- ✓ To interoperate grey repositories link to a CRIS
- ✓ Best: Full CERIF architecture
- ✓ Else: wrap CRIS to interoperate using CERIF

OpenSIGLE, Home to GreyNet's Research Community and its Grey Literature Collections: Initial Results and a Project Proposal

Dominic Farace and Jerry Frantzen; Grey Literature Network Service, Netherlands
Christiane Stock and Nathalie Henrot; INIST-CNRS, France
Joachim Schöpfel; University of Lille 3, France

For the past 15 years, GreyNet has sought to serve researchers and authors in the field of grey literature. To further this end, GreyNet has signed on to the OpenSIGLE repository and in so doing seeks to preserve and make openly available research results originating in the International Conference Series on Grey Literature. GreyNet together with colleagues at INIST-CNRS have designed the format for a metadata record, which encompasses standardized PDF attachments of the authors' conference preprints, PowerPoint presentations, abstracts and biographical notes. In April 2008, the first test batch containing records from the Eighth International Conference on Grey Literature (GL8, 2006) was uploaded. A few minor problems that were encountered have since been successfully resolved; and, these metadata records and corresponding attachments are now available for search and retrieval in OpenSIGLE. Subsequent record entries will follow continuing with GL7 (2005) down to GL6 (2004) and GL5 (2003). By December 2008, conference records over the past five years including those from GL9 (2007) will be available in OpenSIGLE. For this phase of the project, a budget of 2000 Euro was appropriated to cover the costs of formatting, conversion, and technical editing of the 100 plus records. Records from the earlier four conferences in the GL Series (1993-1999) will require additional image scanning as well as permission from Emerald (the former MCB University Press). Should this be granted not only would the total number of GreyNet records in OpenSIGLE be doubled but GreyNet's collection would then be comprehensive.

Project Proposal

If OpenSIGLE is indeed the best home for GreyNet, then some measure of empirical results should be able to confirm it. Results that would demonstrate benefits for both the GreyNet Collection as well as OpenSIGLE. For it is here, where the crossroads of more than 25 years of bibliographic information on grey literature intersects with 15 years of research on grey literature. The analysis of usage statistics and local metrics can draw on the standards and definitions of the COUNTER project for journals and databases but must take into account that little has been published so far on usage statistics of documents deposited in open archives, that standards, recommendations and empirical evidence are still missing, and that the software for the export of statistics need to be improved. Approach, methodology and preliminary usage data will be presented at the GL10 conference, with special attention to comparative data especially from INIST and GreyNet websites, and to the potential and real impact of PR campaign and referencing on usage. We invite other GL authorities to join our development team in order to enhance the research on usage and users of GreyNet's Collection in OpenSIGLE (data collection, metrics etc.). This may also include the evaluation of the role and impact of OpenSIGLE and GreyNet's Collection on the development and functioning of the international GreyNet community and the creation of community-related tools and functionality (web 2.0). If GreyNet is to factor into the design of the 'Grey Grid' for information society, then not only it's place in serving researchers and educators in the field of grey literature must be re/evaluated but also it's place in serving practitioners in the field. Such a study would help to bring this home.

Bionotes

Dominic J. Farace is Director of TextRelease, an Amsterdam based information bureau specializing in grey literature and networked information. He is a native Louisianan and holds two degrees in sociology from Creighton University (BA) and the University of New Orleans (MA). His doctoral dissertation in social sciences is from the University of Utrecht, The Netherlands, where he has lived and worked for the past twenty-seven years. After six years heading the Department of Documentary Information at the Royal Netherlands Academy of Arts and Sciences (Swidoc/KNAW), he founded GreyNet, Grey Literature Network Service, in 1993 and has since been responsible for the international GL-Conference Series. In this capacity, he serves as Program and Conference Director as well as managing editor of the conference proceedings. Since 2004, he is a Guest Lecturer on Grey Literature in the Masters Program at the University of Amsterdam; Instructor of Grey Literature via UNO Distance Education, and Editor of TGJ, The Grey Journal. Email: dominic.farace@textrelease.com

Jerry Frantzen graduated in 1999 from the College of Amsterdam in Library and Information Science. Frantzen is the technical editor of The Grey Journal (TGJ). And, since 1996, he is affiliated with GreyNet, Grey Literature Network Service, as a freelance technical consultant. Email: info@greynet.org

Christiane Stock is the head of Monographs and Grey Literature at INIST-CNRS and gives lectures on grey literature. *INIST-CNRS, 2 allée du Parc de Brabois, F-54519 Vandoeuvre-lès-Nancy Cedex.* Email: stockc@inist.fr

Nathalie Henrot graduated in History, then in Information Sciences from the University of Tours in 1988. She has been working for the INIST-CNRS for seventeen years, more specifically at the Monographs & Grey Literature Section from 1993, for congress proceedings acquisition. She is now the user administrator in the OpenSIGLE project. Email: henrotn@inist.fr

Joachim Schöpfel obtained his Ph.D. in psychology from the Hamburg University in 1992. During his studies in psychology, he participated in research on bilingual children of Turkish immigrants in Hamburg, of the German minority in Denmark, and in a French-German High School in Versailles, France. From 1991 to 2008, he worked at the French Institute for Scientific and Technical Information (INIST-CNRS) in different positions in database production and library management, at last as head of the e-publishing and document supply department. During the same time, he was lecturer at the University of Nancy. At present, he is senior lecturer in information and communication sciences at the Charles de Gaulle University of Lille 3. He published on GL, document delivery, digital libraries, scientific publishing, usage statistics and professional development. Email: joachim.schopfel@univ-lille3.fr

OPENSICLE
SWISSCH FÖR HANDELSWISSENSCHAFTEN UND WIRTSCHAFTSWISSENSCHAFTEN

Future Developments

- Change of "look" of the website
- Project to upload French records from 2005 onwards
- Request to link to full text in external sources
- Add Dutch records ?
- Add current records from other countries
- More networking (Scirus/Scopus)

TENTH INTERNATIONAL CONFERENCE ON GREY LITERATURE

OPENSICLE
SWISSCH FÖR HANDELSWISSENSCHAFTEN UND WIRTSCHAFTSWISSENSCHAFTEN

PART TWO

GreyNet, On the Background and Forefront

- GreyNet's relationship with EAGLE/SIGLE prior to mid-2000
- Relaunch of GreyNet in 2003
- Liquidation of EAGLE/SIGLE in 2005
- OpenSICLE - From a Proposal to Implementation 2005-2007
- GreyNet signs on to the OpenSICLE Repository 2007

TENTH INTERNATIONAL CONFERENCE ON GREY LITERATURE

OPENSICLE
SWISSCH FÖR HANDELSWISSENSCHAFTEN UND WIRTSCHAFTSWISSENSCHAFTEN

GreyNet Community in 2008

- Metadata record customized for enriched publication
- GreyNet's Conference based collections migrate to OpenSICLE
- Now, 5 Years of Research in OpenSICLE (GL5, GL6, GL7, GL8, GL9)
- GL10, GL11, ... will likewise follow suit
- Contact with Emerald concerning first 4 GL-Conferences (1993-1999)
- Initial feedback from GreyNet Community on OpenSICLE

TENTH INTERNATIONAL CONFERENCE ON GREY LITERATURE

[illegible][illegible][illegible]

GL11

Library of Congress
Washington D.C., USA
14-15 December 2009

ELEVENTH INTERNATIONAL CONFERENCE ON GREY LITERATURE

Join the Federal Library and Information Center Committee (FLICC) of the Library of Congress in Washington, DC as host for GL11, December 14 and 15, 2009.

FLICC is an organization of U.S. federal agencies dedicated to cooperation and concerted action within the community of federal libraries and information centers. FLICC and FEDLINK, FLICC's purchasing, training and resource-sharing consortium, achieve better utilization of federal information resources and facilities through promotion of common services, coordination and sharing of available resources and professional development. FLICC is also a forum for discussion of federal library and information policies, programs, and procedures to help inform the Congress, federal agencies, and others concerned with libraries and information centers.

For the latest news on GL11 or FLICC/FEDLINK, visit our Web site at <http://www.loc.gov/flicc>.
